

AKAI SERVICE MANUAL

Intelligent-HQ 8

VIDEO CAMERA RECORDER

MODEL **PV-M2/F**
MODEL **PV-M4/F**

SPECIFICATIONS

PV-M2/F, M4/F		Colour temperature	Auto/ 3200 °K/ 4500 °K/ 7200 °K
Video recording system	Two rotary heads, helical scanning FM system	Minimum illumination	2 lux (F1.8)
Audio recording system	Two rotary heads, helical scanning FM system	Recommended illumination	More than 100 lux
Video signal	PAL colour, CCIR standards	Power source	DC 6.0 V
Usable cassette	8 mm video format cassette	Power consumption	6.5 W including the viewfinder (camera recording)
Recording/playback time		Operating temperature	0°C to +40°C
SP mode	90 min. with P5-90 cassette	Operating humidity	35 % to 80 %
LP mode	180 min. with P5-90 cassette	Dimensions	Approx. 133 (W) X 84 (H) X 168 (D) mm
Tape speed		Weight	
SP mode	Approx. 20.051 mm/sec.	PV-M2	Approx. 660 g (w/o battery)
LP mode	Approx. 10.058 mm/sec.	PV-M4	Approx. 670 g (w/o battery)
FF/REW time	Approx. 6.5 min. with P5-90 cassette	VA-300EA/EK/EG	
Video		Power requirement	AC 110 - 240 V, 50/60 Hz
Line output	Phono jack, 1.0 Vp-p / 75 ohms, unbalanced	Power consumption	24 W
Audio		Output	DC 8.0 V, 1.3 A (charge) DC 6.8 V, 1.8 A (Video camera)
Line output	Phono jack, - 7.5 dBs/2.2 kohms, unbalanced	Charging system	Constant current, Peak detection, timer controlled
Microphone input	Mini jack, - 68 dBs, high impedance, unbalanced with approx. 1.5 V DC output, impedance 6.8 k ohms	Dimensions	69 (W) X 41 (H) X 150 (D) mm
Earphone output	Mini jack	Weight	380 g
Microphone	Electret condenser microphone	Standard accessories	
Image sensor	1/3" CCD image sensor (320,000 pixels)	Operator's manual	1
Lens	F/1.8, f = 6.0 - 48 mm 8 times power zoom lens Filter diameter 37 mm	Rechargeable battery (BP-N300)	1
Viewfinder	Electronic viewfinder with 0.6" (15.2 mm) black/white CRT	DC connection cord	1
Auto focus system	TTL	Shoulder strap (SB-101)	1
Shutter speed	1/50 to 1/10000 (8 steps)	Lithium battery (CR2032E)	1
Aperture control	Automatic	Lithium battery (CR2025E)	1 (PV-M4/F only)
		AV cable (VW-300)	1 (PV-M2 only)
		AV cable (VW-301)	1 (PV-M4 only)
		AV cable (VW-321)	1 (PV-M2F only)
		AV cable (VW-322)	1 (PV-M4F only)
		Carrying case (VG-C301)	1 (PV-M2F, M4F only)
		Cassette tape (P5-60SG)	1 (PV-M2F, M4F only)

0 dBs = 0.775 V

* For improvement purposes, specifications and design are subject to change without notice.

★ SAFETY INSTRUCTIONS

PRECAUTIONS DURING SERVICING

1. Parts identified by the ⚠ (*) symbol are critical for safety. Replace them only with the parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with the specified replacements.
Examples: RF converters, tuner units, antenna selector switches, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
 - 1) Wires covered with PVC tubing
 - 2) Double insulated wires
 - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts.
Note especially:
 - 1) Insulation Tape
 - 2) PVC tubing
 - 3) Spacers (insulating barriers)
 - 4) Insulation sheets for transistors
 - 5) Plastic screws for fixing micro switches
5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap the ends of the wires securely around the terminals before soldering.

6. Make sure that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not come in contact with sharp edged or pointed parts.
8. Also check areas surrounding repaired locations.
9. Make sure that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

SAFETY CHECK AFTER SERVICING

After servicing, make measurements of the leakage current or resistance in order to determine that exposed parts are acceptably insulated from the supply circuit. The leakage-current measurement should be done between accessible metal parts (such as chassis, ground terminal, microphone jacks, signal input/output connectors, etc.) and the earth ground through a resistor of 1500 ohms paralleled with a 0.15 μ F capacitor, under the unit's normal working conditions. The leakage-current should be less than 0.5 mA rms AC.

The resistance measurement should be done between accessible exposed metal parts and power cord plug prongs with the power switch (if included) "ON". The resistance should be more than 2.2 Mohms.

MAKE YOUR CONTRIBUTION TO PROTECT THE ENVIRONMENT

Used batteries with the ISO symbol for recycling as well as small accumulators (rechargeable batteries), mini-batteries (cells) and starter batteries should not be thrown into the garbage can. Please leave them at an appropriate depot.

PRECAUTIONS FOR LITHIUM BATTERY

The lithium battery may explode if incorrectly replaced. [OBSERVE THE FOLLOWING WHEN REPLACING]

- Replace with the same make and type (or equivalent) recommended by the manufacturer.
- Place the battery in the correct polarity.
- Do not short the terminals.
- Do not recharge the battery.
- Do not dispose of the battery in a fire.

NOTE:

Do not disconnect or connect any connectors (especially when the FPC cable is connected) while the power is supplied to the unit even if the POWER SWITCH is turned OFF during servicing. It may cause a short circuit and destroy the resistors or semiconductors.

SAFETY CHECK AFTER SERVICING (VA-300 ONLY)

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.) See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

Table 1 : Ratings for selected areas

AC Line Voltage	Insulation Resistance	Dielectric Strength	Clearance Distance (d), (d')
100 to 240 V	≥ 1 M ohm/500 V DC	1.5 kV 1 minute	≥ 4 mm (d') (a : Power cord)

Note : This table is unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

4. Leakage current test

Confirm specified or lower leakage current between B (earth ground, power cord plug prongs) and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between B (earth ground, power cord plug prongs) and exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure and following table 2.

Table 2 : Leakage current ratings for selected areas

AC Line Voltage	Load Z	Leakage Current (i)	Earth Ground (B) to:
100 to 240V	50 k ohms	$i \leq 0.7$ m A peak $i \leq 2$ m A dc	Other terminals

Note : This table is unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

★ INFORMATION

MODE SET menu

The MODE SET menu can be displayed in the viewfinder or on a monitor TV and used to adjust various VIDEO CAMERA modes. The following modes are displayed.

PV-M2

PV-M4

•SPEED.....SP/LP

Two recording speeds are available.

SP (standard play):

To record in the SP mode (approx. 20.051 mm/sec)

LP (long play):

To record in the LP mode (approx. 10.058 mm/sec)

•REMOTE.....ON/OFF (PV-M4 only)

To engage or cancel the remote control function.

•FADER.....WHITE/BLACK

To set the VIDEO CAMERA for white or black fade in/out.

•A. FADER....ON/OFF

To engage or cancel the auto fader function.

•EDIT.....ON/OFF

To display or cancel displays on the TV monitor. This mode can be used to conveniently cancel displays you do not want to record during tape dubbing.

OFF:

All displays superimposed in the viewfinder will be displayed on the TV monitor.

ON:

Only date/time, title and MODE SET displays will be displayed on the TV monitor. All other displays will appear in the viewfinder only.

•TITLE.....BANK/CHARACTER (PV-M4 only)

To set the camera for stored bank title selection or character generated title (original title) selection.

•T. HEIGHT...DOUBLE/NORMAL

To set the stored title height to normal or double size.

•Hi-Fi.....STEREO/LEFT/RIGHT/L+R (PV-M4 only)

Choose the channel which you wish to monitor when playing back a prerecorded tape which is recorded in stereo or bilingual mode.

STEREO:

Choose this setting when playing back a tape recorded in the Hi-Fi stereo sound.

LEFT:

Choose this setting when you wish to monitor only the left channel of the Hi-Fi stereo tape or main audio portion of a bilingual tape.

RIGHT:

Choose this setting when you wish to monitor only the right channel of the Hi-Fi stereo tape or sub audio portion of a bilingual tape.

L+R:

Choose this setting when you wish to monitor the Hi-Fi stereo or bilingual tape in monaural (or main and sub-mixed).

To set the modes you want:

1. Press the M-SET (MODE SET) button.
The MODE SET menu will appear in the viewfinder.
2. Select the mode to be set with the \wedge or \vee button.
3. Set the mode setting with the $<$ or $>$ button.
4. Repeat steps 2 and 3 to set another mode.
5. Press the SET button after all modes have been set.
The MODE SET menu will disappear.

Note:

- The MODE SET menu can be cancelled at anytime during the above operation by pressing the M-SET button.

TEST MODE

Many kinds of test modes are prepared for the various adjustments on this video camera. In the test mode, a number of the numeral rows appear on the TV screen when the "DISPLAY" button is pressed twice and the data during the adjustment is displayed in hexadecimal numbers in the numeral rows.

Some special characters (marks) are given on respective adjustments and will be displayed on the TV screen during the test mode.

To engage the various test modes, press and hold the assigned buttons shown in the list simultaneously when the power is ON, keep holding the buttons for a few seconds until the test mode number and special character appear on the TV screen.

To cancel the test mode, firmly press the reset button down (the negative battery terminal on the rear) or disconnect the power supply from the unit (in this case, the lithium battery for back up must be removed first.).

To engage various test modes.

TEST MODE No.	BUTTONS PRESSED	PURPOSE	SYMBOL
TEST MODE 02	^ & >	TAPE transport ADJ	OCTOPUS
TEST MODE 04	v & <	VIDEO circuit check	KANGAROO
TEST MODE 81	REC & DATE/TIME	CAMERA general ADJ.	SQUID
TEST MODE 82	COUNTER RESET & DATE/TIME	CAMERA lens ADJ.	OCTOPUS
TEST MODE 11	BACK LIGHT & WHITE BALANCE	VTR section final ADJ.	SQUID
TEST MODE 12	FULL AUTO & SHUTTER	CAMERA's function check	OCTOPUS

The function of TEST MODE 02

BUTTON	FUNCTION
-	The reel rotation sensor and the drum motor stop circuit do not operate in TEST MODE 02.
< or >	To change the ATF off-set bias during playback.
COUNTER RESET	To adjust the video switching point automatically.

The function of TEST MODE 04

BUTTON	FUNCTION
COUNTER RESET	To switch the Y/C separation IR adjusting mode ON/OFF.
<	To change the NOISE CANCEL level.
>	To change the Y comb filter level.

The function of TEST MODE 11

BUTTON	FUNCTION
REC	When playing back an SP pre-recorded tape, adjust the switching point automatically and the data will be memorized in the EEP ROM IC.
>	Set the ATF bias level to +1.
<	Set the ATF bias level to -1.
^	Set the ATF bias level at maximum.
v	Set the ATF bias level at minimum.
PLAY	Set the ATF bias level to the center.
SHUTTER	To memorize the present ATF bias level to the EEP ROM IC and set it as the center value.
I-HQ	To switch the I-HQ ON / OFF.
SET	To memorize the present I-HQ data to the EEP ROM IC.
WHITE BALANCE	To move the switching pulse to the PCM zone.
STILL	To change the tape speed during recording.
FADER	To select the normal or faded picture (white or black).
^ & v	To set the IMS characters to English.
> & <	To set the IMS characters to French.

The function of TEST MODE 12

BUTTON	FUNCTION
SHUTTER	Shutter speed changes from 1/50 to 1/10000 and back to 1/50 automatically (in 8 steps).
WHITE BALANCE	White balance changes in one complete cycle automatically.

IMPORTANT:

1. Auto focus tracking adjustment is absolutely necessary in the following conditions. Refer to step 5-3-2 on page 49.

- 1) The LENS BLOCK or ZOOM ENCODER PCB (on the LENS BLOCK) is replaced.
- 2) The CCD element or CAMERA (1) PCB is replaced.
- 3) The EEP-ROM IC (IC310), micro processing IC (IC309) or OPE-AMP IC (IC304 or 305) in the CAMERA (1) PCB is replaced.

2. I-HQ ENVE DET PRESET adjustment is necessary to maintain proper performance in the following conditions. Refer to step 5-4-3 on page 52.

- 1) EEP-ROM IC (IC310), micro processing IC (IC309) in the CAMERA (1) PCB is replaced or CAMERA (1) PCB is replaced.

2) HEAD DRUM BLOCK is replaced.

3) PRE AMP PCB is replaced.

3. If the HEAD DRUM BLOCK is replaced, the following adjustments are necessary to maintain proper performance. Make sure to demagnetize the rotary heads before proceeding.

- 1) PB switching point adjustment. (Electrical adj. 5-4-1)
- 2) ATF tracking adjustment. (Electrical adj. 5-4-2)
- 3) I-HQ ENVE DET PRESET adjustment. (Electrical adj. 5-4-3)
- 4) A/V head REC current adjustment. (Electrical adj. 5-2-1, step 6 & 5-2-2, step 5, 6)

I. DISASSEMBLY

In case of trouble, etc. necessitating dismantling, please dismantle in the order shown in the illustrations. Reassemble in the reverse order.

1-1. Removal of the UPPER CASE BLOCK

1. Remove the two (A) screws which retain the right side of the UPPER CASE BLOCK.
2. Remove the (B) screw and remove the LENS HOOD.
(If there is no hole on the lens decoration plate, peel off the lens decoration plate then remove the (B) screw.)

Fig.1-1

3. Remove the (C) screw and (D) screw which retain the left side of the UPPER CASE BLOCK.

Fig.1-2

4. Remove the REMOTE CONTROL UNIT if it is mounted (PV-M4 only) and remove the (E) screw which retains the upper side of the UPPER CASE BLOCK.

Fig.1-3

1-2. Removal of the BOTTOM CASE BLOCK

1. Remove the three (A) screws and remove the STAND HOLDER.

Fig.1-4

2. Remove the (B) screw and five (C) screws as shown in Fig.1-4 then remove the BOTTOM CASE BLOCK.

1-3. Removal of the BATTERY HOLDER CASE

1. Remove the four (A) screws which retain the BATTERY HOLDER CASE and remove it.

Fig.1-5

1-4. Removal of the GRIP CASE BLOCK

1. Remove the (A) screw and two (B) screws then remove the GRIP CASE BLOCK.

Fig.1-6

1-5. Removal of the MIC BLOCK

1. If it is necessary to detach the UPPER CASE BLOCK completely, unlock the stoppers of the P17 and P711 connectors by pulling them in the direction of the arrow then disconnect both the FPC (Flexible Printed Circuit) cables. And then disconnect the P13 connector to detach the UPPER CASE BLOCK.

Fig.1-7

2. Disconnect the P501 connector as shown in Fig.1-7
3. Remove the (A) and (B) screws which retain the MIC BLOCK as shown in Fig.1-8.

Fig.1-8

1-6. Removal of the OPERATION A BLOCK

1. Unlock the stopper of the P710 connector as shown in Fig.1-7 and disconnect the FPC cable.
2. Remove the (A) and (B) screws which retain the OPERATION A BLOCK and remove it.

Fig.1-9

1-7. Disassembling the UPPER CASE BLOCK

1-7-1. Removal of the VIEWFINDER BLOCK

1. Disconnect the P119 connector on the CONNECTOR PCB.

Fig.1-10

2. Remove the two (A) screws which retain the VIEWFINDER BLOCK.

1-7-2. Removal of the CONNECTOR PCB

1. Disconnect the P119 connector on the CONNECTOR PCB.
2. Remove the two (A) screws on the OPERATION H (M4) BLOCK (PV-M4) and (B) screw on the REMO-CON PIN PCB as shown in Fig.1-11.

Fig.1-11 (PV-M4)

Remove the two (A) screws and three (B) screws which retain the OPERATION H (M2) BLOCK (PV-M2) as shown in Fig.1-12.

Fig.1-12 (PV-M2)

3. Remove the two ③ screws on the CONNECTOR PCB as shown in Fig.1-11 (or Fig.1-12) then remove the three ④ screws and ⑤ screw on the OPERATION TW BLOCK as shown in Fig.1-13

Fig.1-13

3. Peel off the decoration plate on the AV OUT JACK then remove the two ⑥ screws and remove the AV JACK.

Fig.1-15

4. Remove the CONNECTOR PCB (with the OPERATION H BLOCK, OPERATION TW BLOCK and REMOCON PIN PCB attached) very carefully so as not to damage the FPC cables.

4. Remove the two ③ screws which retain the REC SWITCH PCB as shown in Fig.1-14 then remove the AV JACK BLOCK carefully.

1-7-3. Removal of the AV JACK BLOCK

1. Remove the CONNECTOR PCB (refer to 1-7-2).
2. Remove the two ① screws and remove the REMOTE SENSOR BLOCK (PV-M4 only).

Fig.1-14

II. PRINCIPAL PARTS LOCATION

Fig. 2-1 Top view

- 1. CAMERA (1) PCB
- 2. CAMERA (2) PCB
- 3. CCD PCB
- 4. LENS BLOCK

| 12. LOADING LEADER (T) PART | 25. CENTER CAM GEAR |
| 13. CAPSTAN MOTOR | 26. (S) REEL PART |

III. MAIN COMPONENTS REPLACEMENT

Note: When disassembling the MECHA. BLOCK, the LOADING MECHANISM must firstly be set to the eject position. Press the EJECT button before disassembling the unit.

3-1. Removal of the POWER SUPPLY PCB

1. Remove the two (A) screws which retain the POWER SUPPLY PCB as shown in Fig. 3-1.

Fig. 3-1

2. While holding the CHASSIS and POWER SUPPLY PCB, squeeze the POWER SUPPLY PCB gently and pull it forwards to detach the J709 connector from the P309 connector on the MAIN PCB.
3. To remove the POWER SUPPLY PCB from the MECHANISM BLOCK, disconnect the P706 connector on the POWER SUPPLY PCB which comes from the CAMERA BLOCK.

3-2. Removal of the CAMERA BLOCK

3-2-1. Removal of the CAMERA BLOCK

1. Remove the POWER SUPPLY PCB (refer to step 3-1).
2. Unlock the stopper of the P5 connector on the MAIN PCB located on the bottom and disconnect the FPC cable as shown in Fig.1-7.
3. Remove the (A) screw on the rear of the chassis.

Fig. 3-2

4. Remove the (B) screw on the LENS BLOCK left side and the (C) screw on the front of the chassis then remove the CAMERA BLOCK.

Fig. 3-3

3-2-2. Removal of the LENS BLOCK

1. Unlock the stopper of the P304 connector on the CAMERA (1) PCB and disconnect the LENS BLOCK's FPC cable.

Fig. 3-4

2. Remove the LENS BLOCK retaining (A), (B), (C) and (D) screws as shown in Fig.3-4 and while holding the CAMERA (2) PCB with your right hand, squeeze and pull the CCD PCB shield cover in the direction of the arrow very carefully with your left hand to detach the LENS BLOCK (with CCD PCB attached) from the CAMERA (2) PCB.
3. In case you are removing the CAMERA (1) PCB and CAMERA (2) PCB from the LENS HOLDER (2) part, take care not to scratch any of the chips mounted on the PCB by the chassis's PCB holders (grooves on the chassis).
4. Reassemble in the reverse order for installation.

3-2-3. Removal of the CCD PCB.

1. Remove the two (A) CCD PCB retaining screws and detach the CCD PCB carefully.

Fig. 3-5

2. When re-attaching the CCD PCB to the LENS BLOCK, take care not to damage or bend the CCD's leads.

3-2-4. Removal of the CCD

1. Remove the two (A) screws which retain the CCD PLATE.

Fig. 3-6

2. If the X'TAL FILTER comes out of the LENS BLOCK or it has to be replaced for some reason, take care of the direction when installing it.

Fig. 3-7

3. When reassembling, very carefully clean the surface of the X'TAL FILTER (if it is removed from the LENS BLOCK) and CCD element (on the CCD PLATE) before installation. (We recommend using lens cleaning paper or a lens cleaning cloth). After confirmation that there is no dust, dirt or any finger prints on the surface of the CCD (and the X'TAL FILTER), attach the RUBBER SEAL on the CCD.
4. Place the CCD plate (with the rubber seal attached) on the LENS BLOCK, the oval shaped hole (CCD's groove side) on the CCD PLATE must be the right side as shown in Fig. 3-6. Then tighten the two retaining screws.

Note 1:

Do not try to detach the CCD from the CCD PLATE, as it is precisely mounted on the CCD PLATE, with glue, at the factory by using a special jig. The CCD is always supplied mounted on the CCD PLATE.

Note 2:

Once the CCD plate is replaced or removed from the LENS BLOCK, auto focus tracking adjustment must be performed. Refer to the 5-3-2, "AUTO FOCUS TRACKING ADJUSTMENT" on page 49.

3-3. Removal of the MECHA. BLOCK

3-3-1. Removal of the MECHA. COVER PART

1. Remove the POWER PCB and CAMERA BLOCK (refer to 3-1 and 3-2).
2. Remove the (A), (B) and three (C) screws as shown in Fig. 3-8.

Fig. 3-8

3. Remove the three ④ screws then remove the MECHA. COVER PART.

Fig. 3-9

3-3-2. Removal of the MAIN PCB

1. Remove the MECHA. COVER PART (refer to 3-3-1).
2. Unlock the stopper of the P312 connector and disconnect the MECHANISM SENSOR's FPC cable.

Fig. 3-10

3. Remove the two ③ screws and lift up the ② part to disconnect the connector between the PRE AMP PCB and MAIN PCB as shown in Fig. 3-10.

4. Turn over the MAIN PCB taking care not damage to the other FPC cables.

Unlock the stoppers of the P307 and P308 connectors then disconnect both the DRUM MOTOR and CAPSTAN MOTOR FPC cables.

Fig. 3-11

3-3-3. Removal of the CAMERA HOLDER BLOCK

1. Remove the MAIN PCB (refer to 3-3-2).
2. Remove the two ③ screws and remove the CAMERA HOLDER BLOCK (LENS HOLDER (1) PART and LENS HOLDER (3) PART).

Fig. 3-12

3-3-4. Removal of the PRE AMP PCB

1. Unlock the stopper of the P916 connector on the PRE AMP PCB and disconnect the FPC cable which comes from the LOWER DRUM BLOCK.
2. Remove the (A) screw and remove the PRE AMP PCB.

Fig. 3-13

3-4. Disassembling the MECHA. BLOCK

Note:

- It is necessary to remove the POWER SUPPLY PCB, CAMERA BLOCK, CAMERA HOLDER BLOCK, PRE AMP PCB and the MECHA. COVER PART in most cases before proceeding.
- Set the loading mechanism to the "reference position" supplying DC 4.5 V to the LOADING MOTOR before proceeding.

Fig. 3-14

At the reference position, the CENTER CAM GEAR's (A) hole must be aligned with its reference hole on the chassis and the MODE SWITCH's (B) hole must be aligned with its reference hole on the chassis and hole on the SLIDER PLATE.

3-4-1. Removal of the HEAD DRUM BLOCK

1. Remove the three (A) screws as shown in Fig. 3-15.

Fig. 3-15

2. When reattaching the HEAD DRUM BLOCK, taking care not to damage the FPC cables

Note:

1. When replacing the HEAD DRUM BLOCK, handle it with special care to avoid any scratching on the upper and lower head drums, or damaging the rotary head tips.
2. After replacement, the following adjustments are necessary for proper performance. And make sure to demagnetize the rotary heads before proceeding.
 - 1) PB switching point adjustment. (Electrical adj. 5-4-1)
 - 2) ATF tracking adjustment. (Electrical adj. 5-4-2)
 - 3) I-HQ reference voltage memorization. (Electrical adj. 5-4-3)
 - 4) A/V head REC current adjustment. (Electrical adj. 5-2-1, step 6 & 5-2-2, step 5, 6)

3-4-2. Removal of the DRUM MOTOR PCB

1. Remove the HEAD DRUM BLOCK (refer to step 3-4-1).
2. Remove the (A) screw and remove the EARTH BRUSH as shown in Fig. 3-16.

Fig. 3-16

3. Remove the three (B) screws and remove the DRUM CHASSIS carefully as shown in Fig. 3-16.
4. Remove the four (C) screws on the MOTOR HOLDER as shown in Fig. 3-17.

Fig. 3-17

5. Remove the two (D) screws which retain the ROTARY PLATE and remove the ROTARY PLATE. As the power of the magnet on the ROTARY PLATE is very strong and the DRUM MOTOR PCB is sandwiched between the ROTARY PLATE and DRUM PLATE, take care not to damage the DRUM MOTOR PCB when removing the ROTARY PLATE. First removing the ROTARY PLATE with DRUM MOTOR PCB and DRUM PLATE attached from the COLLAR PRELOAD is recommended. Then hold the ROTARY PLATE and remove the DRUM PLATE very carefully.

6. Reassemble in the reverse order for installation. When reattaching the ROTARY PLATE, the (A) hole on the COLLAR PRELOAD must be aligned with the (B) hole on the ROTARY PLATE as shown in Fig. 3-18.

Fig. 3-18

Note:

After replacement, the following adjustments are necessary for proper performance.

- 1) PB switching point adjustment. (Electrical adj. 5-4-1)
- 2) ATF tracking adjustment. (Electrical adj. 5-4-2)

3-4-3. Removal of the EJECTOR BLOCK

1. Remove the slit washers on both the left and right sides of the MECHA. BLOCK as shown in Fig. 3-19.

Fig. 3-19

2. Extract the individual guide pins from the respective guide holes on the chassis taking care not to damage them.
3. Reassemble in the reverse order for installation.

3-4-4. Removal of the HEAD CLEANER BLOCK and TAPE GUIDE HOLDER

1. Remove the EJECTOR BLOCK (refer to 3-4-3).
2. Unhook the cleaner arm spring then release the stopper of the CLEANER ARM BLOCK as shown in Fig. 3-20 and remove it.

Fig. 3-20

3. Remove the two (A) screws then remove the TAPE GUIDE HOLDER PART.
4. After replacement, reassemble in the reverse order for installation. When reattaching the TAPE GUIDE HOLDER, insert the pin of the CLEANER JOINT LEVER into the hole on the REVIEW ARM.

3-4-5. Removal of the CAPSTAN MOTOR BLOCK

1. Remove the EJECTOR BLOCK (refer to 3-4-3).
2. Remove the TAPE GUIDE HOLDER BLOCK (refer to 3-4-4, 3).
3. Remove the (A) screw and remove the CAPSTAN MOTOR as shown in Fig. 3-21.

Fig. 3-21

4. Reassemble in the reverse order for installation.

3-4-6. Removal of the PINCH ROLLER BLOCK

1. Remove the EJECTOR BLOCK (refer to 3-4-3).
2. Remove the (A) screw and remove the PINCH ROLLER BLOCK by pulling it up.

Fig. 3-22

3. When installing, make sure to align the SLIDER LEVER's pin with the hole on the PINCH LEVER as shown in Fig. 3-22.

3-4-7. Removal of the (T) REEL PART

1. Remove the EJECTOR BLOCK and PINCH ROLLER BLOCK (refer to 3-4-3 and 3-4-6).
2. Remove the two BRAKE GUIDE retaining (A) screws.

Fig. 3-23

3. Unhook the BRAKE ARM SPRING then move the BRAKE ARM PART in the direction of the arrow and pull it up, taking care when removing it.
4. Remove the (T) REEL PART from its shaft.
5. Reassemble in the reverse order for installation.

3-4-8. Removal of the (S) REEL PART and TENSION BLOCK

1. Remove the EJECTOR BLOCK (refer to 3-4-3).
2. Remove the (A) screw and remove the BAND GUIDE.

Fig. 3-24

3. Remove the BRAKE GUIDE then remove the (S) REEL PART from its shaft taking care not to damage the TENSION SHEET.
4. Remove the slit washer on the TENSION LEVER PART and unhook the TENSION SPRING then remove the TENSION BLOCK.
5. Reassemble in the reverse order for installation.

3-4-9. Replacement of the SYNCHRO BELT

1. Remove the EJECTOR BLOCK (refer to 3-4-3).
2. Remove the CAPSTAN MOTOR BLOCK (refer to 3-4-5).
3. Remove the PINCH ROLLER BLOCK (refer to 3-4-6).
4. Remove the (T) REEL PART (refer to 3-4-7).
5. Remove the IDLER PART by pulling it up then remove the SYNCHRO BELT as shown in Fig. 3-25.

Fig. 3-25

6. Reassemble in the reverse order for installation. When replacing a new SYNCHRO BELT, take care not to damage or scratch it.

3-4-10. Replacement of the LOADING MOTOR

1. Remove the EJECTOR BLOCK (refer to 3-4-3).
2. Unsolder the two red and white wires from the flexible PCB.

Fig. 3-26

3. Remove the two (A) screws which retain the MOTOR CHASSIS as shown in Fig. 3-26.
4. Remove the two (B) screws which retain the LOADING MOTOR and replace it with a new one as shown in Fig. 3-27.

Fig. 3-27

5. Reassemble them in the reverse order for installation. When reattaching the MOTOR CHASSIS on the MECHA. CHASSIS, take care not to loose the timing of the RELAY GEAR and TOGGLE GEAR as shown in Fig. 3-28 (refer to 3-4-11, steps 8 to 9 if necessary).

Fig. 3-28

When soldering the two wires, the black wire should be soldered on the right side (marked "B" on the flexible PCB).

3-4-11. Replacement of the MODE SWITCH

1. Remove the EJECTOR BLOCK (refer to 3-4-3).
2. Remove the BAND GUIDE and TENSION BLOCK (refer to 3-4-8, steps 2 & 4).
3. Remove the two MOTOR CHASSIS retaining screws (refer to 3-4-10, step 3)
4. Remove the RELAY GEAR and CENTER CAM GEAR by pulling them upwards as shown in Fig. 3-29.
5. Remove the (A) screw which retains the MODE SWITCH and remove the MODE SWITCH carefully so as not to damage the flexible PCB as shown in Fig. 3-29.
6. Unsolder the MODE SWITCH and carefully peel it off from the flexible PCB.
7. Replace it with a new one and install it in the reverse order. When soldering the MODE SWITCH, take special care to place the MODE SWITCH in the correct position on the flexible PCB. And make sure that the MODE SWITCH's (B) hole is aligned with its reference hole on the chassis and the hole on the SLIDER PLATE PART.
8. Place the CENTER CAM GEAR on the MECHA. CHASSIS. At this point, align the (C) part (part with unbroken teeth) of the MODE SWITCH with the groove on the CENTER CAM GEAR as shown in Fig. 3-30.

Fig. 3-30

And also move the PINCH CAM LEVER in the direction of the arrow and set it where the pin of the PINCH CAM LEVER is visible through the hole on the CENTER CAM GEAR as shown in Fig. 3-29.

Fig. 3-29

9. Place the RELAY GEAR so that the (D) mark on the RELAY GEAR is aligned with the "<" mark on the TOGGLE GEAR as shown in Fig. 3-29.
10. Attach the MOTOR CHASSIS by tightening the two retaining screws.
11. Supply DC 4.5 V to the LOADING MOTOR and confirm that the loading mechanism operates properly in both the loading and unloading directions and each gear is correctly aligned.

NOTE:

Take care not to damage the flexible PCB near the MOTOR CHASSIS during this procedure.

3-4-12. Disassembling the loading mechanism

1. Remove the EJECTOR BLOCK and HEAD DRUM BLOCK (refer to 3-4-1 and 3-4-3).
2. Remove the CAPSTAN MOTOR BLOCK (refer to 3-4-5, 2 to 3).
3. Remove the PINCH ROLLER BLOCK (refer to 3-4-6, 2)
4. Remove the LOADING MOTOR BLOCK retaining screw (refer to 3-4-10, step 3).
5. Remove the (A) screw which retains the SUPPLY LOADING LEADER PART as shown in Fig.3-31.

Fig. 3-31

6. Remove the three (B) screws then remove the (S) GUIDE RAIL BLOCK as shown in Fig. 3-31.
7. Remove the (C) screw which retains the (T) GUIDE RAIL as shown in Fig.3-32.

Fig. 3-32

8. Then remove the RELAY GEAR and TOGGLE GEAR BLOCK (TOGGLE GEAR, TOGGLE LEVER and TOGGLE LEVER TORSION SPRING) with the TAKE UP LOADING LEADER PART, take care not to lose the TOGGLE LEVER TORSION SPRING as it may jump free.

TOGGLE GEAR BLOCK

Fig. 3-33

9. Remove the two (D) screws then remove the GEAR PLATE PART as shown in Fig. 3-34.

Fig. 3-34

10. Remove the LOADING GEAR BLOCK (LOADING (1) GEAR, LOADING (2) GEAR and LOADING TORSION SPRING) and slide the RING SLIDER in the clockwise direction to remove the RING SLIDER from the RING HOLDER as shown in Fig. 3-35. Then remove the RING HOLDER and replace it if necessary.

Fig. 3-35

11. To reassemble these parts, proceed in the reverse order of step 1 to 10.

When reassembling parts concerned with the MODE SWITCH's timing, proceed with special care.

- 1) When placing the LOADING GEAR BLOCK on the MECHA. CHASSIS, both the LOADING GEAR BLOCK's \oplus hole and RING SLIDER's Δ mark should be aligned with their reference hole on the MECHA. CHASSIS as shown in Fig. 3-35.
- 2) When placing the TOGGLE GEAR BLOCK, the TOGGLE GEAR BLOCK's \oplus mark should be aligned with the LOADING GEAR BLOCK's shaft as shown in Fig. 3-33.
- 3) When placing the RELAY GEAR, the RELAY GEAR's \odot mark must be aligned with the \triangleleft mark of the TOGGLE GEAR (refer to 3-4-11, step 9). At this point confirm that the \odot part (the part with unbroken teeth) of the MODE SWITCH is aligned with the groove on the CENTER CAM GEAR and the MODE SWITCH's \oplus hole is aligned with its reference hole on the CHASSIS and the hole of the SLIDER PLATE (refer to Fig. 3-30 and 3-29).

IV. MECHANICAL ADJUSTMENT

4-1.BACK TENSION

1. Play back a CASSETTE TORQUE METER TW-6111 (AJ-729749J) and confirm that the reading of the SUPPLY REEL on the meter is 6.5 to 9 g-cm.
2. If the result is not satisfactory, loosen the (A) screw and adjust the TB HOLDER position repeatedly until the result is satisfactory.

Fig. 4-1

3. The fluctuation of the reading during playback, should be less than 2 g-cm.
If the result is not satisfactory, check the (S) REEL PART.

4-2.TAPE TRANSPORT ADJUSTMENT

NOTE:

1. The following adjustments are required only when an irregularity is found since these adjustments are precisely corrected at the factory.
2. When the HEAD DRUM BLOCK is replaced, perform only step 4-2-3, loading leader height adjustment.
3. Remove the CAMERA BLOCK first before making the adjustment and set the unit to the TEST mode 02 (refer to the information section on page 5).

4-2-1. REVIEW ARM height adjustment

1. Play back a recorded tape which is no longer needed.
2. Check the tape transport near the REVIEW ARM TAPE GUIDE. If it is not satisfactorily, turn the (A) nut on the REVIEW ARM TAPE GUIDE until the edge of the tape barely touches the lower part of the TAPE GUIDE without any curl or wrinkle.

Fig. 4-2

3. Confirm that there is no curl or wrinkle between the PINCH ROLLER and REVIEW ARM TAPE GUIDE.

4-2-2. SUPPLY TAPE GUIDE height adjustment

1. Play back a recorded tape which is no longer needed and set the unit to the REVIEW mode.
2. Check the tape transport near the SUPPLY TAPE GUIDE. If it is not satisfactorily, turn the (B) nut on the SUPPLY TAPE GUIDE until there is no curl or wrinkle near the SUPPLY TAPE GUIDE.

Fig. 4-3

3. Confirm that there is no curl or wrinkle between the (T) ROLLER TAPE GUIDE and REVIEW ARM TAPE GUIDE as shown in Fig. 4-2.
4. If the result is not satisfactory, readjust the REVIEW ARM TAPE GUIDE and SUPPLY TAPE GUIDE height.

4-2-3. LOADING LEADER height adjustment

1. Slightly loosen the set screws on the lower part of both the LOADING LEADER (T) PART and (S) PART with a hexagon screw driver, so that the tape guide can be adjusted with reasonable tightness.

Fig. 4-4

2. Connect an oscilloscope's CH-1 to TERMINAL PCB P27 ① pin (PB ENVE) and CH-2 to ② pin (SWP) for triggering.
3. Play back the reference tape TF-200RFS (AT-751834J).
4. Turn the LOADING LEADER (T) and (S) head individually to obtain a flat RF envelope, as the ideal envelope shown in Fig. 4-5.

5. Play back the reference tape TF-201RFL (AT-751835J) then finely adjust both the LOADING LEADERS to obtain the best RF envelope.
6. Set the unit to the TEST mode 11 (refer to the information section) and press the WHITE BALANCE button and confirm that the RF envelope shares about 2/3 of the switching pulse width (including PCM zone) and also the fluctuating envelope's upper and lower edge is almost flat.

Fig. 4-6

7. After the adjustment is completed, tighten both the set screws with the hexagonal screw driver
8. In case the result is not satisfactory, repeat the adjustment from 4-2-1 to 4-2-3, step 5.

Fig. 4-5

V. ELECTRICAL ADJUSTMENT

Precautionary items prior to adjustments.

1. The video output terminal should be terminated with 75 ohms (connect a dummy load or 75 ohms input TV).
2. Some adjustments should be performed in the "TEST MODE". Refer to the "INFORMATION" section on page 5.
3. When adjusting the MAIN PCB (VTR section), Connect a colour bar generator to the TERMINAL PCB which should be supplied as a servicing jig.
4. When adjusting the CAMERA section, the TERMINAL PCB is necessary as well as the MAIN PCB adjustment.
5. Some adjustments require the MAIN PCB to be turned over and extension cables to be connected. (5-2-1, step 3 and 5-2-2, step 1 & 2).

The following test tapes are required

Test tape	Part No.
TF-200RFS	AT-751834J
TF-201RFL	AT-751835J
TF-202CBS	AT-751836J
TF-203CBL	AT-751837J
TF-250AT	AT-751833J

5-1. POWER SUPPLY PCB

Note:

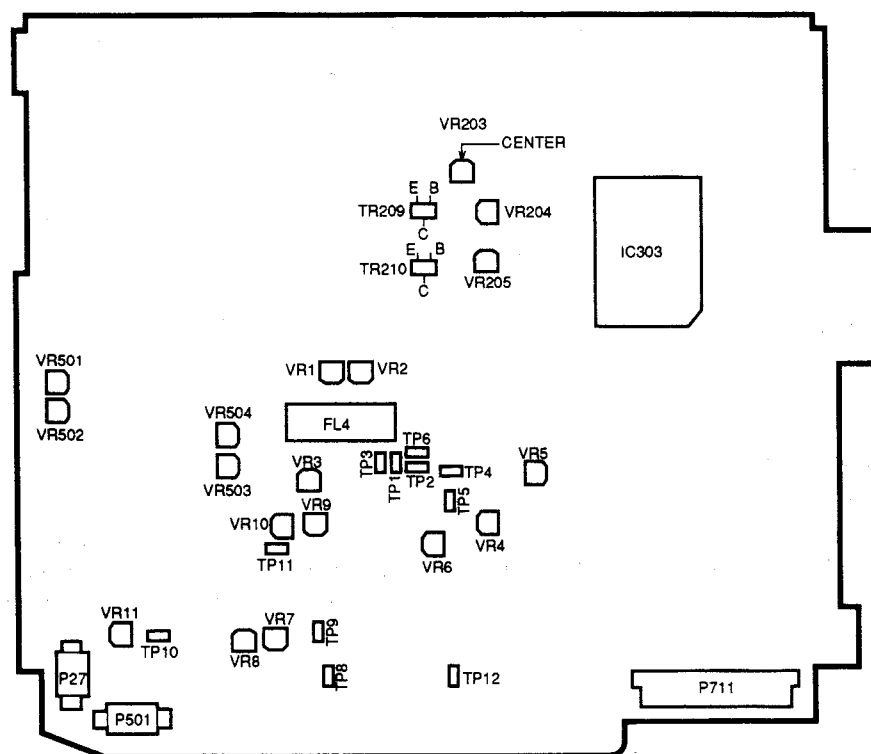

Check that there is no power supplied to the unit before making adjustment. Then detach the POWER SUPPLY PCB from the MAIN PCB and remove the shield cover with a soldering iron. Connect the MAIN PCB P309 and POWER SUPPLY PCB J709 with the extension cable. Then supply power to the unit and slide the power switch to the "CAMERA" position.

POWER SUPPLY PCB (TOP VIEW)

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
1	AL 5V	-	CAMERA ON	Pattern (shown Ⓐ arrow)	VR703	Connect a digital DC voltmeter to point Ⓐ (where the C743 positive lead is soldered) then adjust VR703 so that the reading on the meter is 4.90 ± 0.02 V.
2	CAMERA 5V	-	CAMERA ON	P706 ③ or ④ pin	VR702	Connect a digital DC voltmeter to the P706 ③ or ④ pin then adjust the VR702 so that the reading on the meter is 4.78 ± 0.03 V.

5-2.MAIN PCB

MAIN PCB (BOTTOM VIEW)

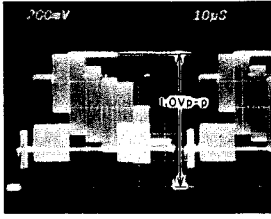

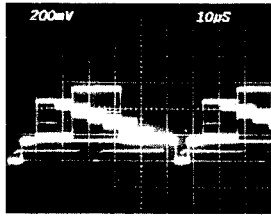

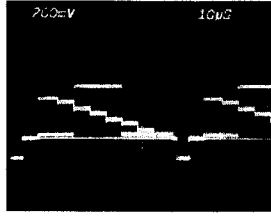

5-2-1.VIDEO ADJUSTMENT

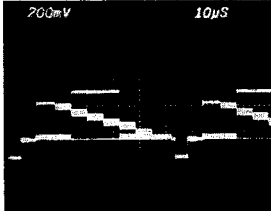

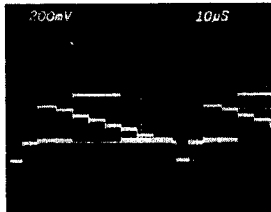

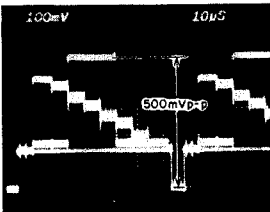

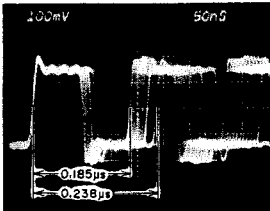

MAIN PCB (TOP VIEW)

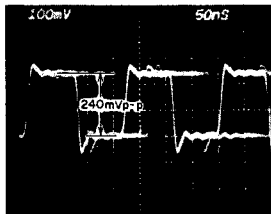

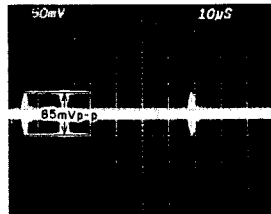

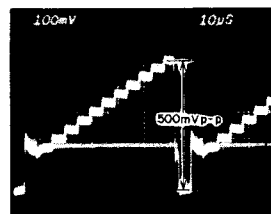

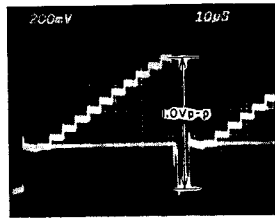

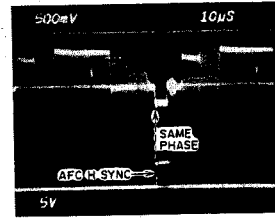

Note:

- 1.Solder the Y/C OUT lead wire from the TERMINAL PCB to point ① before making the adjustment.
- 2.Supply 3.0 to 4.0 volts to point ② when adjusting step 3) (I REFERENCE adj).
- 3.If the REC → PB picture quality is not satisfactory even if the REC CURRENT adjustment has been performed, demagnetize the rotary heads and try again.

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
1	VIDEO AGC	PAL colour bar signal	CAMERA EE & TEST mode 02	TP8 (with 75 ohms termination)	VR6	 <p>Solder the Y/C out lead wire to the appropriate point as shown on page 29 then supply the PAL colour bar signal. Connect an oscilloscope to TP8 and adjust VR6 so that the VIDEO level is 1.0 Vp-p.</p>
2	Y/C COMB FILTER	PAL colour bar signal	CAMERA EE & TEST mode 04	TP2	VR5 & VR4	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Supply the colour bar signal (the same as step1) and connect an oscilloscope to TP2. Press the "COUNTER RESET" button and adjust VR5 and VR4 alternately so that the chroma level is minimum.</p>

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
3	I REFERENCE	PAL colour bar signal	CAMERA EE & TEST mode 04	TP1	VR3	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Supply the colour bar signal (the same as step1) and connect an oscilloscope to TP1. Supply 3 to 4 volts to the ⑧ point (IC1 ⑤ pin, SWP) as shown on page 29 so that output of TP1 disappears. Press the "COUNTER RESET" button to resume output on TP1. Then adjust VR3 so that the chroma level is minimum.</p>
4	Y EMPHASIS	PAL colour bar signal	CAMERA EE & TEST mode 02	TP3	VR1	 <p>Supply the same colour bar signal as step1. Connect an oscilloscope to TP3 and adjust VR1 so that the Y level is 500 mVp-p.</p>
5	FM CARRIER & DEVIATION	Stair step signal	CAMERA EE & TEST mode 02	TP9	VR10 & VR9	 <p>Supply the stair step signal in the same way as step1. Connect an oscilloscope to TP9 and adjust VR10 so that the sync tip becomes 0.238 μs (4.2 MHz). Adjust VR9 so that the white peak becomes 0.185 μs (5.4 MHz). Adjust the VR10 and VR9 alternately until the result is satisfactory.</p>

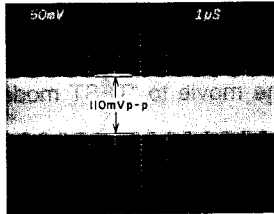

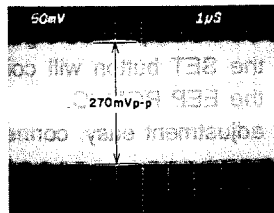

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
6	VIDEO REC CURRENT	-	CAMERA REC & TEST mode 11	TP9 & VR203 (center)	VR7 & VR203	<p>Disconnect the Y/C IN wire at point ① and connect the CAMERA BLOCK. Set the unit to TEST mode 11 and press the FADER button to choose WHITE FADE mode. Connect an oscilloscope to TP9 and adjust VR7 (Y REC CURRENT) so that the Y REC CURRENT is 240 mVp-p.</p>  <p>REC Y</p> <p>Connect CH-1 of the oscilloscope to VR203 center lead and CH-2 to VIDEO OUT or fH/2 for triggering. Adjust VR203 so that the CHROMA REC CURRENT is 85 mVp-p at the burst signal area as shown.</p>  <p>REC CHROMA</p> <p>Press the FADER button to resume the normal camera mode and make a recording on the blank tape then play it back to check the picture quality. If it is not satisfactory, demagnetize the rotary heads and check the recording quality again.</p>
7	PB Y LEVEL.1	TEST TAPE TF-200RFS	VTR PB	TP6	VR8	 <p>Connect an oscilloscope to TP6 and adjust VR8 so that the Y level is 500 mVp-p.</p>

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
8	PB Y LEVEL 2	TEST TAPE TF-200RFS	VTR PB	TP8 (with 75 ohms termination)	VR2	 <p>Connect an oscilloscope to TP8 and adjust VR2 so that the Y level is 1.0 Vp-p.</p>
9	SKEW H PHASE	TEST TAPE TF-200RFS	VTR PB (CUE or REVIEW)	TP8 & TP12	VR11	 <p>Connect CH-1 of an oscilloscope to TP8 and CH-2 to TP12. Adjust VR11 (AFC H PHASE) so that the leading edge of the AFC H sync aligns with the leading edge of the VIDEO OUT's H sync.</p>

5-2-2.AUDIO & SERVO ADJUSTMENT

MAIN PCB (TOP VIEW)

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
1	I _o (1.5 MHz)	Test tape TF-200RFS	PB & audio mode: stereo (PV-M4)	IC501 ④ pin (test point ①) & ⑥ pin (test point ③)	VR502	Play back the test tape TF-200RFS. Read the V REF voltage at point ① (the voltage should be about 2.1 V) with a digital DC voltmeter. Then connect a digital DC voltmeter to point ③ and adjust VR502 so that the voltage is exactly the same as V REF voltage.
2	I _o (1.7 MHz) (PV-M4 only)	Test tape TF-200RFS	PB & audio mode: stereo	IC502 ④ pin (test point ①) & ⑥ pin (test point ③)	VR503	Play back the test tape TF-200RFS. Read the V REF voltage at point ① (the voltage should be about 2.1 V) with a digital DC voltmeter. Then connect a digital DC voltmeter to the point ③ and adjust VR503 so that the voltage is exactly the same as V REF voltage.
3	L+R DEV	TEST TAPE TF-203CBL	PB & audio: L-CH only	LINE OUT	VR501	Play back the test tape TF-203CBL. (PV-M4: Set the audio monitor to L-CH) Adjust VR501 so that the output level is - 7.5 dBs.
4	L-R DEV (PV-M4 only)	TEST TAPE TF-203CBL	PB & audio: R-CH only	LINE OUT	VR504	Play back the test tape TF-203CBL and set the audio monitor to R-CH. Adjust VR504 so that the output level is - 7.5 dBs.
5	A. FM REC CURRENT	-	CAMERA REC	TR209 (emitter)	VR204	 <p>Connect an oscilloscope to the TR209 emitter lead and adjust VR204 so that the AUDIO FM REC CURRENT is 110 mVp-p, as shown.</p>
6	ATF REC CURRENT	-	CAMERA REC	TR210 (emitter)	VR205	 <p>Connect an oscilloscope to the TR210 emitter lead and adjust VR205 so that the ATF REC CURRENT is 270 mVp-p as shown.</p>

5-3.CAMERA BLOCK ADJUSTMENT

5-3-1.STANDARD ADJUSTMENT

Standard setting for the CAMERA BLOCK adjustment

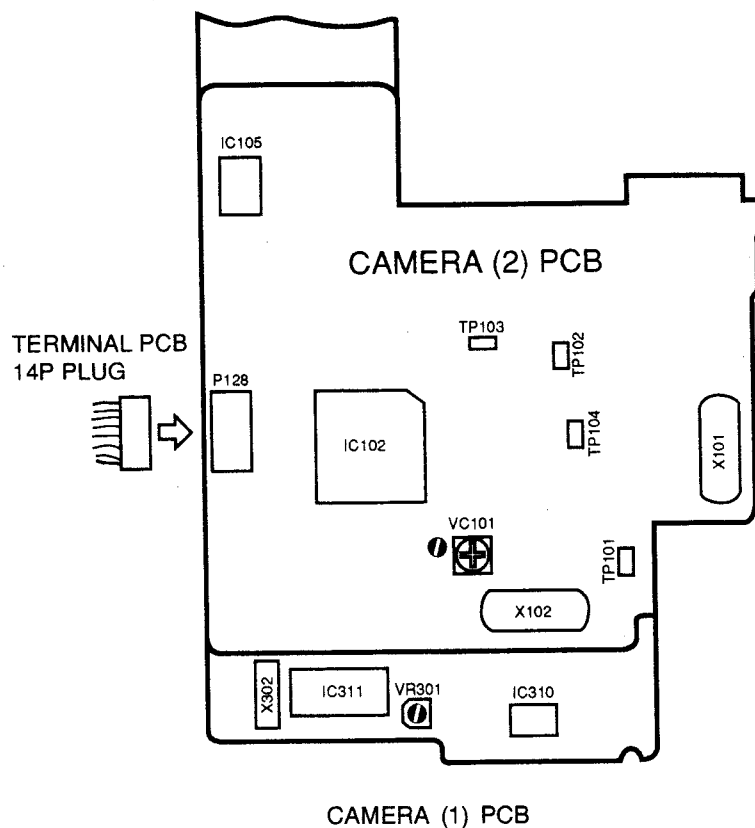

- Pattern: Reflection type, GREY SCALE or COLOUR BAR (we recommend the use of a light box with a transparent chart, instead of the reflection type, and a halogen lamp)
- Light: 3150 ± 50 °K (colour temperature), 3500 ± 500 Lx (intensity)
- Distance between the pattern and lens: 2 m
- Waveform size: $40 \mu\text{s}$ (at stair step part or colour bar part) on the oscilloscope
- VECTOR SCOPE setting: 75 % saturation

Note

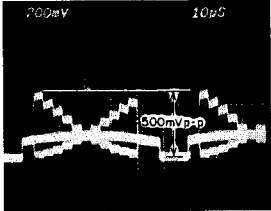

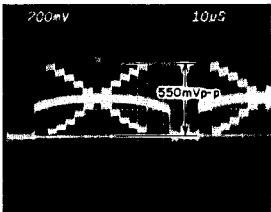

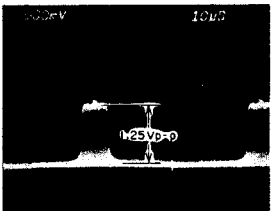

*Most of the camera adjustments should be performed in "TEST mode 81" using the micro computer and D/A converter equipped with this video movie.

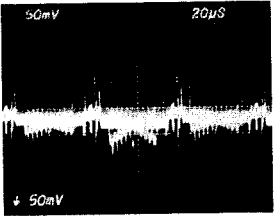

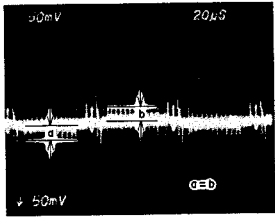

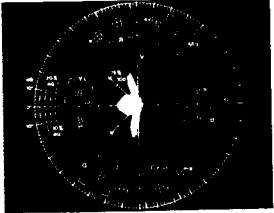

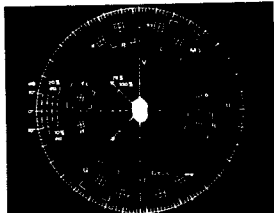

To set the movie to "TEST mode 81", refer to the "TEST MODE" section in "INFORMATION" on page 5.

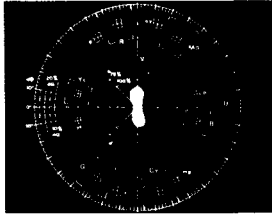

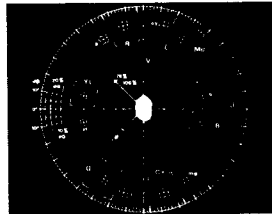

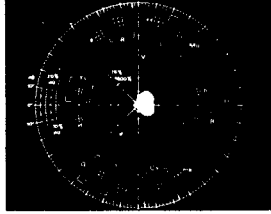

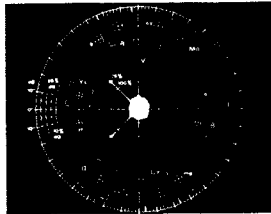

1. Engage TEST mode 81, a squid mark appears on the screen. Then press the "display" button. A number of numeral rows appear on the screen. The 2 digit number in the right upper corner is a preset number. (Make sure that the ELECTRIC VIEWFINDER is connected, to display the data on the screen.)
2. Start the adjustment from "No.00" (preset No.00) and each time you press the SET button or > button, you can proceed to the next preset number. Pressing the < button will return to the previous preset number.
When proceeding to the next preset number without adjustment, never press the "SET" button, only use the > button.
3. Adjustment is possible by pressing the ^ or v buttons, and the data you are adjusting is displayed in hexadecimal numbers on the display during adjustment.
4. Pressing the SET button will conclude the adjustment in each preset number. Adjusted data will be memorized and stored in the EEP ROM IC.
5. To make adjustment easy, connect CH-2 of an oscilloscope to the TERMINAL PCB P128 ① pin (1/2 fH) for triggering in most cases.

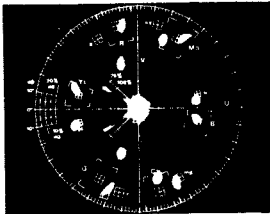

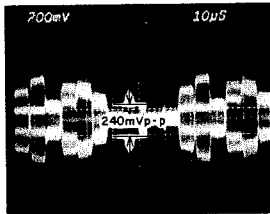

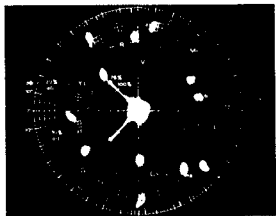

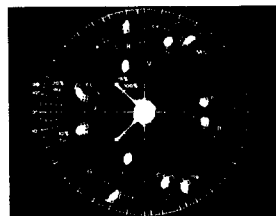

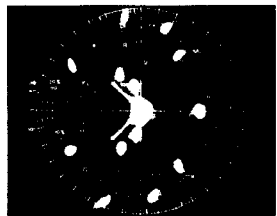

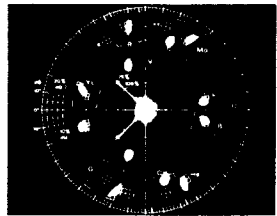

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
1	fsc	-	EE, "PRESET No.00"	TP101 (CAMERA (2) PCB)	VC101	Connect a digital DC voltmeter to TP101. Adjust VC101 so that the reading on the meter is 2.2 ± 0.1 V. (Pressing the "SET" button will skip "PRESET No.01" and proceed to "PRESET No.02" automatically.)
2	HALL AMP OFF-SET.1	-	EE, "PRESET No.00"	-	-	Press the "SET" button.
3	HALL AMP OFF-SET.2	-	EE, "PRESET No.01"	-	-	No operation.
4	øR OFF-SET	-	EE, "PRESET No.02"	TV SCREEN	^ or v button	If a white line appears on the left side of the screen, press the cursor button until the line disappears and press the "SET" button. (Unless the white line is on the screen, adjustment is not necessary. Simply press the "SET" button.)
5	CDS LEVEL (IRIS close)	-	EE, "PRESET No.03"	TERMINAL PCB P128 ⑬ pin (IRIS LEVEL)	VR301	Connect a digital DC voltmeter to the TERMINAL PCB P128 ⑬ pin and adjust VR301 so that the voltage is $DC\ 0.45 \pm 0.05V$. Then press the "SET" button. (Pressing the "SET" button will skip "PRESET No.04 and No.05" and proceed to "PRESET No.06" automatically.)

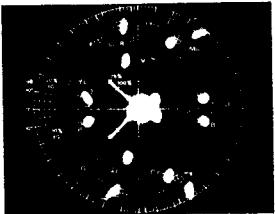

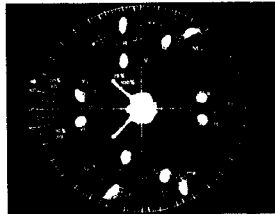

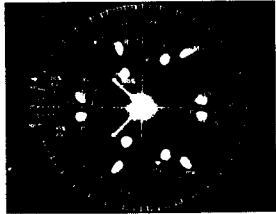

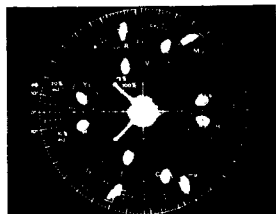

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
6	IRIS CONTROL VOLTAGE (IRIS close)	-	EE, "PRESET No.04"	-	-	No operation.
7	IRIS LEVEL (IRIS open)	-	EE, "PRESET No.05"	-	-	No operation.
8	CDS LEVEL	GREY SCALE CHART	EE, "PRESET No.06"	TERMINAL PCB P128 ⑦ pin (CDS 4)	∧ or ∨ button	 <p>Connect an oscilloscope to the TERMINAL PCB P128 ⑦ pin. Adjust one of the cursor buttons so that the CDS level becomes 500 mVp-p. Then press the "SET" button.</p>
9	IRIS LEVEL CHECK	GREY SCALE CHART	EE, "PRESET No.05"	TERMINAL PCB P128 ⑬ pin (IRIS LEVEL)	-	Connect an oscilloscope to the TERMINAL PCB P128 ⑬ pin. Press the < button and go back to "PRESET No.05". Adjust the camera zoom so that the stair step waveform part is 40 μs width. Confirm that the IRIS LEVEL is DC 4.2 ± 0.2 V.
10	Y. AGC LEVEL	GRAY SCALE CHART	EE, "PRESET No.07"	TERMINAL PCB P128 ⑩ pin (AGC OUT)	∧ or ∨ button	 <p>Connect an oscilloscope to the TERMINAL PCB P128 ⑩ pin. Adjust one of the cursor buttons so that the Y. AGC LEVEL is 550 mVp-p. Then press the SET button.</p>
11	V sub	Spotlight	EE, "PRESET No.08"	TERMINAL PCB P128 ⑦ pin (CDS 4)	∧ or ∨ button	 <p>Connect an oscilloscope to the TERMINAL PCB P128 ⑦ pin and shoot a very bright object, like a spotlight. Adjust one of the cursor buttons so that the voltage of the shoulder part of the waveform is 1.25 V and the smear is minimum. Then press the "SET" button.</p>

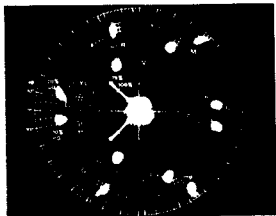

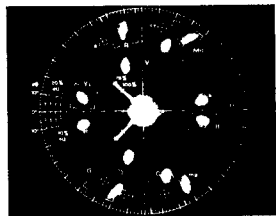

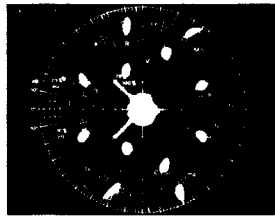

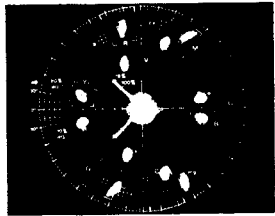

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
12	Cyan 1 GAIN	GRAY SCALE CHART	EE, "PRESET No.09"	TERMINAL PCB P128 ④ pin (CY) & ⑥ pin (CY 1)	^ or v button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect CH-1 of an oscilloscope to the TERMINAL PCB P128 ④ pin (CY) & CH-2 to ⑥ pin (CY 1). Set the oscilloscope's display mode to "ADD" and CH-2 polarity to "INVERTED". Press one of the cursor buttons so that "a" level is equal to "b" level between each adjacent H period. Then press the "SET" button.</p>
13	Yellow 1 GAIN	GRAY SCALE CHART	EE, "PRESET No.0A"	VIDEO OUT & TERMINAL PCB P128 ③ pin (YE), ⑤ pin (YE 1)	^ or v button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to the VIDEO OUT and press the cursor button until the vibration of the center part is minimum. Then connect CH-1 of an oscilloscope to the TERMINAL PCB P128 ③ pin (YE) and CH-2 to ⑤ pin (YE 1). Set the oscilloscope's display mode to "ADD" and CH-2 to "INVERTED". Confirm that the "a" level is equal to "b" level the same as in step 12, in each adjacent H period. Then press the "SET" button.</p>

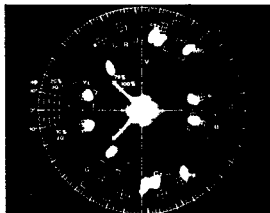

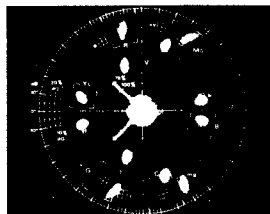

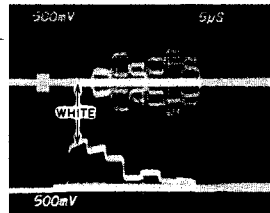

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
14	R-Y CARRIER BALANCE	-	EE, "PRESET No.0B"	VIDEO OUT	∧ or ∨ button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT. Press the cursor button so that the two separated spots become one spot and are positioned in the center of the scale (will move up and down). Then press the "SET" button.</p>
15	B-Y CARRIER BALANCE	-	EE, "PRESET No. 0C"	VIDEO OUT	∧ or ∨ button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT. Press the cursor button so that the center spot is positioned in the center of the scale (will move left and right). Then press the "SET" button.</p>

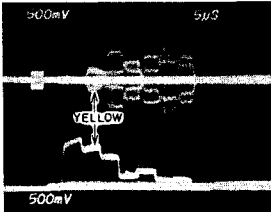

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
16	BURST PHASE	COLOUR BAR CHART	EE, "PRESET No.0D"	VIDEO OUT	^ or v button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter on the lens. Press the cursor button so that the correct burst angle is obtained. Press the "SET" button.</p>
17	BURST LEVEL	COLOUR BAR CHART	EE, "PRESET No. 0E"	VIDEO OUT & TERMINAL PCB P128 ⑭ pin (C. OUT)	^ or v button	 <p>Connect an oscilloscope to the TERMINAL PCB P128 ⑭ pin (C.OUT) and mount a C-9 filter on the lens. Press the cursor button so that the burst level is 240 mVp-p as shown. Then press the "SET" button.</p>  <p>Note: Connect a vector scope to the VIDEO OUT and set the vector scope gain so that the burst signal level is exactly on the 75 % scale. Proceed the adjustment with this setting hereafter.</p>

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
18	HUE	COLOUR BAR CHART	EE, "PRESET No. 0F"	VIDEO OUT	△ or ∇ button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions. Then press the "SET" button.</p>
19	R-Y WHITE BALANCE (4500 °K)	COLOUR BAR CHART	EE, "PRESET No. 10"	VIDEO OUT	△ or ∇ button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter (4500 °K colour temperature adjustment) on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions (will move up or down). Then press the "SET" button.</p>

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
20	B-Y WHITE BALANCE (4500 °K)	COLOUR BAR CHART	EE, "PRESET No.11"	VIDEO OUT	^ or v button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter on the lens. 21	R-Y LEVEL (4500 °K)	COLOUR BAR CHART	EE, "PRESET No.12"	VIDEO OUT	^ or v button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.</p>

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
22	B-Y LEVEL (4500 °K)	COLOUR BAR CHART	EE, "PRESET No.13"	VIDEO OUT	△ or ∇ button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.</p>
23	R-Y MATRIX (4500 °K)	COLOUR BAR CHART	EE, "PRESET No.14"	VIDEO OUT	△ or ∇ button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.</p>

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
24	B-Y MATRIX (4500 °K)	COLOUR BAR CHART	EE, "PRESET No-15"	VIDEO OUT	^ or v button	 <p>INCORRECT</p>  <p>CORRECT</p> <p>Connect a vector scope to VIDEO OUT and mount a C-9 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.</p>
25	HIGH CLIP	COLOUR BAR CHART	EE, "PRESET No.16"	TERMINAL PCB P128 ⑦ pin (CDS4) & ⑭ pin (C.OUT)	^ or v button	 <p>Connect CH-1 of an oscilloscope to the TERMINAL PCB P128 ⑦ pin (CDS4), CH-2 to ⑭ pin (C.OUT) and mount a C-9 filter on the lens. Zooming the lens to the wide position so that the yellow part level of the CDS4 waveform is 800 mV. While observing the C.OUT waveform, press the cursor button until the carrier of the white part just disappears. Press the "SET" button when the adjustment is performed satisfactorily.</p>

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
26	CHROMA CLIP	COLOUR BAR CHART	EE, "PRESET No.17"	TERMINAL PCB P128 ⑦ pin (CDS4) & ⑭ pin (C.OUT)	△ or ∇ button	 <p>Keep the zoom lens and oscilloscope in the same condition as 25). Press the cursor button until the yellow part level starts reducing. Then zoom the lens to the telephoto position and confirm there is no carrier on the white part of the waveform. If there is no carrier, press the "SET" button. In case the carrier appears at the white part, press the cursor button again until the carrier just disappears and yellow part level starts reducing. Repeat the same procedure until the carrier does not appear on the white part when the zoom lens is moved. Press the "SET" button when the adjustment is performed satisfactory.</p>
27	R-Y WHITE BALANCE (7200 °K)	COLOUR BAR CHART	EE, "PRESET No.18"	VIDEO OUT	△ or ∇ button	Connect a vector scope to VIDEO OUT and mount a C-16 filter (7200 °K colour temperature adjustment) on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions (will move up or down). Then press the "SET" button.
28	B-Y WHITE BALANCE (7200 °K)	COLOUR BAR CHART	EE, "PRESET No.19"	VIDEO OUT	△ or ∇ button	Connect a vector scope to the VIDEO OUT and mount a C-16 filter on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions (will move left or right). Then press the "SET" button.
29	R-Y LEVEL (7200 °K)	COLOUR BAR CHART	EE, "PRESET No.1A"	VIDEO OUT	△ or ∇ button	Connect a vector scope to VIDEO OUT and mount a C-16 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.
30	B-Y LEVEL (7200 °K)	COLOUR BAR CHART	EE, "PRESET No.1B"	VIDEO OUT	△ or ∇ button	Connect a vector scope to VIDEO OUT and mount a C-16 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.
31	R-Y MATRIX (7200 °K)	COLOUR BAR CHART	EE, "PRESET No.1C"	VIDEO OUT	△ or ∇ button	Connect a vector scope to VIDEO OUT and mount a C-16 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
32	B-Y MATRIX (7200 °K)	COLOUR BAR CHART	EE, "PRESET No.1D"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-16 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.
33	R-Y WHITE BALANCE (3200 °K)	COLOUR BAR CHART	EE, "PRESET No.1E"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-1 filter on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions (will move up or down). Then press the "SET" button.
34	B-Y WHITE BALANCE (3200 °K)	COLOUR BAR CHART	EE, "PRESET No.1F"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-1 filter on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions (will move left or right). Then press the "SET" button.
35	R-Y LEVEL (3200 °K)	COLOUR BAR CHART	EE, "PRESET No.20"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-1 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.
36	B-Y LEVEL (3200 °K)	COLOUR BAR CHART	EE, "PRESET No.21"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-1 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.
37	R-Y MATRIX (3200 °K)	COLOUR BAR CHART	EE, "PRESET No.22"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-1 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.
38	B-Y MATRIX (3200 °K)	COLOUR BAR CHART	EE, "PRESET No.23"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-1 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.
39	R-Y WHITE BALANCE (FL LAMP)	COLOUR BAR CHART	EE, "PRESET No.24"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-8 filter on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions (will move up or down). Then press the "SET" button.
40	B-Y WHITE BALANCE (FL LAMP)	COLOUR BAR CHART	EE, "PRESET No.25"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-8 filter on the lens. Press the cursor button so that the colour's spots on the screen are as near as possible in the correct positions (will move left or right). Then press the "SET" button.

Step	Adjustment item	Input signal or test tape	Mode	Test point	Adjustment part	Result and remarks
41	R-Y LEVEL (FL LAMP)	COLOUR BAR CHART	EE, "PRESET No.26"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-8 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.
42	B-Y LEVEL (FL LAMP)	COLOUR BAR CHART	EE, "PRESET No.27"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-8 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.
43	R-Y MATRIX (FL LAMP)	COLOUR BAR CHART	EE, "PRESET No.28"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-8 filter on the lens. Press the cursor button so that the blue spot is in the correct position. Press the "SET" button.
44	B-Y MATRIX (FL LAMP)	COLOUR BAR CHART	EE, "PRESET No.29"	VIDEO OUT	^ or v button	Connect a vector scope to VIDEO OUT and mount a C-8 filter on the lens. Press the cursor button so that the red spot is in the correct position. Press the "SET" button.
45	AUTO W. BALANCE (4600 °K)	GRAY SCALE CHART	EE, "PRESET No.2A"	-	-	Mount a C-8 filter on the lens and press the "SET" button.
46	AUTO W. BALANCE CALCULATION	-	EE, "PRESET No.2B"	-	-	Press the "SET" button.

5-3-2. AUTO FOCUS TRACKING ADJUSTMENT

Setting for the CAMERA AUTO FOCUS TRACKING adjustment

- Pattern : Siemens chart
- Distance between the pattern and camera lens : exactly 3 m. (If the distance is not accurate, proper adjustment can not be performed.)
- TEST mode : "TEST mode 82" (refer to the information section on page 5.)
- Light : Center of the chart is not saturated when the zoom is in the full wide position as "TEST mode 82" will set the IRIS fully open.

Note:

- The purpose of this adjustment is when zooming from "wide" to "telephoto" (or vice versa), the focus lens follows the zoom lens motion and tries to keep the focus in the best position. And also sets the zoom lens's telephoto and wide end positions within range, not losing the focus. These control data will be kept in the EEPROM IC.
- Unless it is absolutely necessary, do not perform this adjustment as it is complicated and will take too much time.
- In case the auto focus tracking adjustment is necessary:
 1. The LENS BLOCK or ZOOM ENCODER PCB (on the LENS BLOCK) is replaced.
 2. The CCD element or CAMERA (1) PCB is replaced.
 3. The EEPROM IC (IC310), micro processing IC (IC309) or OPE-AMP IC (IC304 or 305) in the CAMERA (1) PCB is replaced.

- 1) Mount a unit on a tripod and set it so that the camera lens is exactly 3 m away from the siemens chart.
- 2) Engage "TEST mode 82", an octopus mark appears on the screen. Then press the "DISPLAY" button. A number of numeral rows appear on the screen. The numbers necessary on this adjustment are shown below. Confirm that the mode number is now "00".

A → T/W 1 (A/D) data : Use this zoom lens position data in step 3) or 7).

B → FOCUS CONDITION data : This value becomes maximum when the focus is in the best position during the adjustment. Use this value to find the best position when adjusting the focus manually with the "+" or "-" buttons.

C → MODE number : Present mode number is indicated during the adjustment.

D → T/W 2 (CAL) data : Use this value when comparing the data in step 12), in the telephoto position.

E → T/W 1 (CAL) data : Use this value when comparing the data in step 12), in the wide position.

F → FP number : Focus lens position data. Use this data in steps 5), 6), 8) to 10) and 12).

-
- 3) Set the zoom lens until the T/W 1 data becomes "61" by pressing the \wedge or \vee buttons while the unit is in "mode No.00".
 - 4) Press the ">" button once and proceed to "mode No.01"
Then press the "-" (or "+") button on the viewfinder until the picture on the screen is just in focus. (Pressing the "FOCUS" button once instead of the "-" or "+" button to set the AUTO FOCUS ON, is much easier for finding the best focus position.)
 - 5) Press the "SET" button. The mode number turns to "02". Then press the "<" cursor button once to return to "mode No.01" and confirm that the FP (focus position) number is "00 00".
 - 6) Set the focus lens by pressing the "+" (or "-") button until the FP number becomes "FE EC". Then press the zoom "T" button (or \wedge button) until the picture on the screen is just in focus in the telephoto position.
(Never set the unit to the auto focus mode in this step.)
Now read the T/W 1 data on the screen, and calculate the value of the T/W 1 data minus 34. If the value is 00, proceed to step 9). In case the value is not "00", proceed to step 7).
 - 7) Return to "mode No.00" by pressing the "<" button. Set the new T/W 1 data. For example, if the value is +3, add 3 to the original T/W 1 data "61". Therefore the result becomes 64. So, set the T/W 1 data to "64" by pressing the " \vee " button. Then repeat steps 4) to 5) and proceed to step 8).
 - 8) Set the focus lens by pressing the "+" (or "-") button until the FP number becomes "FE EC". Then press the zoom "T" (or \wedge button) until the picture on the screen is just in focus in the telephoto position.
(Never set the unit to the auto focus mode in this step.)
 - 9) Press the "SET" button twice. Then return to "mode No.01" and press the "+" (or "-") button until the FP number becomes "FF BB". Press the "SET" button once then press the ">" button. Now Confirm that the mode number is "03" and FP number is "00 00".
 - 10) Move the zoom lens to the wide direction by pressing the "W" zoom (or " \vee ") button until the picture is just in focus. Then press the "SET" button. The focus lens starts moving until the sensor position is detected automatically. A few second later, the mode number will turn to "04". Now Confirm the FP number shown in the screen. If the FP number is between "96" to "FA", it means the adjustment is satisfactory. Press the "SET" button and conclude the adjustment. The mode number turns to "05" automatically.
If the FP number is not between "96" to "FA", repeat the adjustment from steps 3) to 10) until the result is satisfactory.
 - 11) Press the "FOCUS" button and set the unit to the "auto focus mode". Confirm that the focus is following satisfactorily when zooming the lens from wide to telephoto or vice versa. (Press only the zooming "T" or "W" button in this step. Never press the \wedge or \vee buttons as they will not detect both ends of the tracking range.)
 - 12) Confirm whether the adjustment is perfect or not, by referring to the reference focus lens tracking data shown on next page. Set the zoom to the full wide position and read the T/W 1 (CAL) data and FP number data on the screen and compare with the reference data in the T/W 1 (CAL) list. If the actual data is within ± 3 of the reference data, the result is almost satisfactory. Then Set the zoom to the full telephoto position and read the T/W 2 (CAL) data and FP number data on the screen and compare it with the reference data in the T/W 2 (CAL) list. If the actual data is within ± 3 of the reference data, the result is almost satisfactory. Pick up a few points near zoom wide end and telephoto end and repeat the same procedure. If each comparison result is within ± 3 of the respective reference data, it means adjustment is satisfactory. Disengage "TEST MODE 82" by pressing the camera reset switch (the negative side of the battery terminal pin) located on the rear panel or disconnecting the power supply. In case the comparison value exceeds ± 3 , repeat the adjustment from the steps 3) to 11) until the result is satisfactory.

FP number list when the distance between the camera lens and chart is 3 m.

5-4. FINAL ADJUSTMENT

Note : Set the unit to "TEST MODE 11" and press the "DISPLAY" button to display the MI-COM data on the screen (refer to the information section on page 5 before proceeding).

5-4-1. SWITCHING POINT ADJUSTMENT

1. Connect CH-1 of an oscilloscope to VIDEO OUT and CH-2 to the P27 ② pin (SWP) on the TERMINAL PCB.
2. Play back the reference tape TF-200RFS and press the "REC" button. Confirm that the switching point is positioned 7 H before the leading edge of the V-sync.

5-4-2. ATF TRACKING ADJUSTMENT

1. Connect CH-1 of an oscilloscope to the P27 ① pin (PB ENVE) and CH-2 to the P27 ② pin (SWP) for triggering on the TERMINAL PCB.
2. Play back the reference tape TF-200RFS and press the < or > button repeatedly until the RF envelope level becomes maximum and as flat as possible.
3. Press the "SHUTTER" button to memorize the best tracking point. Then press the "PLAY" button during playback to set the tracking center and confirm that the RF envelope is still at maximum.

5-4-3. MEMORIZATION OF THE I-HQ REFERENCE VOLTAGE

1. Connect CH-1 of an oscilloscope to the P27 ① pin (PB ENVE) and CH-2 to the P27 ② pin (SWP) for triggering on the TERMINAL PCB.
2. Set the tape speed to the "SP" mode.
3. Make a recording on TEST TAPE TF-250AT (AT-751833J) and play it back.
4. Press the > or < button repeatedly until the envelope level becomes maximum and observe the I-HQ ENVE DET data. Then press the > button until the I-HQ ENVE data value becomes minus 4 from the maximum point of the data.

```

(SP) (LP)

I-HQ. PRESET DATA

PRESENT I-HQ. ENVE DET DATA

5. Press the "SET" button and confirm that the ENVE DET data is almost the same as I-HQ PRESET data.
6. Set the tape speed to the "LP" mode and repeat steps 3 to 5.

5-5.AC ADAPTOR (VA-300) DC OUT ADJUSTMENT

1. Connect the video camera (PV-M2/M4) to the AC ADAPTOR and turn the camera POWER ON.
2. Connect a DC digital voltmeter to the DC OUT jack on the MAIN PWB.
3. Adjust VR21 so that the output voltage is 7.0 V.

VI. PARTS LIST

ATTENTION

1. When placing an order for parts, be sure to list Part No., Model No. and the description of each part. Otherwise, the non-delivery of the part or the delivery of a wrong part may result.
2. Please make sure that Part No. is correct when ordering.
If not, a part different from the one you ordered may be delivered.
3. Since the parts shown in Parts List of Preliminary Service Manual may have been the subject of changes, please use this Parts List for all future reference.

HOW TO USE THIS PARTS LIST

1. This Parts List lists those parts which are considered necessary for repairs. Other common parts, such as resistors and capacitors, are listed in the "Common List for Service Parts" from which these parts should be selected and stocked.
2. The Recommended Spare Parts List shows those parts in the Parts List which are considered particularly important for service.
3. Parts not shown in the Parts List and "Common List for Service Parts" will not in principle be supplied.
4. How to read the Parts List.

WARNING: Δ INDICATES SAFETY CRITICAL COMPONENTS. FOR CONTINUED SAFETY, REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER'S RECOMMENDED PARTS.
 AVERTISSEMENT: Δ IL INDIQUE LES COMPOSANTS CRITIQUES DE SÉCURITÉ. POUR MAINTENIR LE DEGRÉ DE SÉCURITÉ DE L'APPAREIL, NE REMPLACER QUE DES PIÈCES RECOMMANDÉES PAR LE FABRICANT.

SUB PWB (1) HB01278B

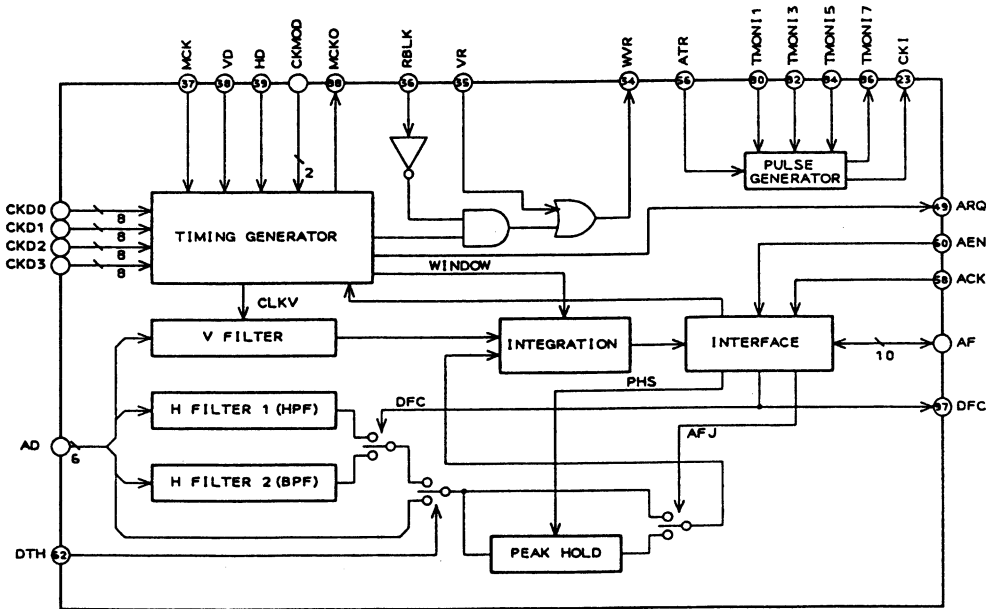

SUB PWB (2) HB01278C

DAF02-FSY (AUTO CHASE FOCUS PROCESSOR)

PORT NAME	PIN No.	FUNCTION
CKD10	30	Vertical effective position assignment value. (Initial value is E1 by internal pull up resistors)
CKD11	33	
CKD12	41	
CKD13	42	
CKD14	43	
CKD15	46	
CKD16	48	
CKD17	50	
CKD20	51	Vertical divided block size assignment value. (Initial value is F0 by pull up resistors)
CKD21	52	
CKD22	55	
CKD23	57	
CKD24	59	
CKD25	61	
CKD26	63	
CKD27	67	
CKD30	5	Horizontal effective position assignment value. (Initial value is FF by internal pull up resistors)
CKD31	6	
CKD32	7	
CKD33	8	
CKD34	9	
CKD35	10	
CKD36	11	
CKD37	12	
CKD40	13	Horizontal divided block size assignment value. (Initial value is FF by pull up resistors)
CKD41	14	
CKD42	16	
CKD43	17	
CKD44	18	
CKD45	19	
CKD46	20	
CKD47	21	
AF0	64	Data transfer ports to / from CAMERA control MI-COM. AF0 to AF7 : Bus (controlled by AEN) AF8, AF9 : Output ports Outputs the focus data / recieves filter, focus mode and window data.
AF1	66	
AF2	68	
AF3	70	
AF4	72	
AF5	73	
AF6	74	
AF7	75	
AF8	44	
AF9	45	
ACK	58	MI-COM data transfer clock.
AEN	60	MI-COM data transfer enable.
ARQ	49	Data transfer request signal.
AD0	100	Video signal inputs from the A/D convertor (6 bits). These are inputs of the various digital filters and also bases of the focus data when generating the focus data.
AD1	99	
AD2	98	
AD3	96	
AD4	93	
AD5	91	
ATR	56	Focus motor drive pulse processing trigger.
CK1	23	Focus motor drive pulse output.
VD	38	V-sync input.
HD	39	H-sync input.

PORT NAME	PIN No.	FUNCTION
VR	35	IMS character data input.
RBLK	36	IMS character's edge data input.
WVR	34	IMS character (with frame) data output
MCK	37	Master clock.
MCKO	88	A/D convertor clock (controlled with CKMOD0,1 and MCK)
CKMDO	92	Selection of the clock's division factor. (Initial value is 4 by internal pull up.) 0: MCK, 1: 1/2 MCK, 3: 1/3 MCK, 4: 1/4 MCK.
CKMD1	95	
SRST	47	System reset input.
DFC	97	To select the filter mode BPF or HPF. (H: BPF)
DTH	62	To select the digital through mode. H: through (filter pass) mode.
TJ	31	To select the test mode (H: test mode, L: normal mode).
TSM1	1	Test pins (Test monitor select).
TSM2	2	
TSM3	24	
TSM4	25	
TC1	69	Test pins (to select internal counter when counter test mode).
TC2	71	
TC3	76	
TC4	77	
TCS	89	To select counter test mode (Initial value is H: normal mode).
TCK	94	Test pin for TEST clock (Initial value is L).
TMONI1	80	CK1 mode select.
TMONI3	82	0: 390 pps, 1: 240 pps, 2:120 pps, 3: 60 pps.
TMONI5	84	To select the sequential sending mode (L: sequential mode, initial value is H)
TMONI7	86	ATR output to the motor driver when sequential mode.
TMONI2	81	Test pins (test monitor output).
TMONI4	83	
TMONI6	85	
TMONI8	87	
TIN3	22	Test pins (test data inputs, initial value is 0).
TIN4	26	
TIN5	27	
TIN6	32	

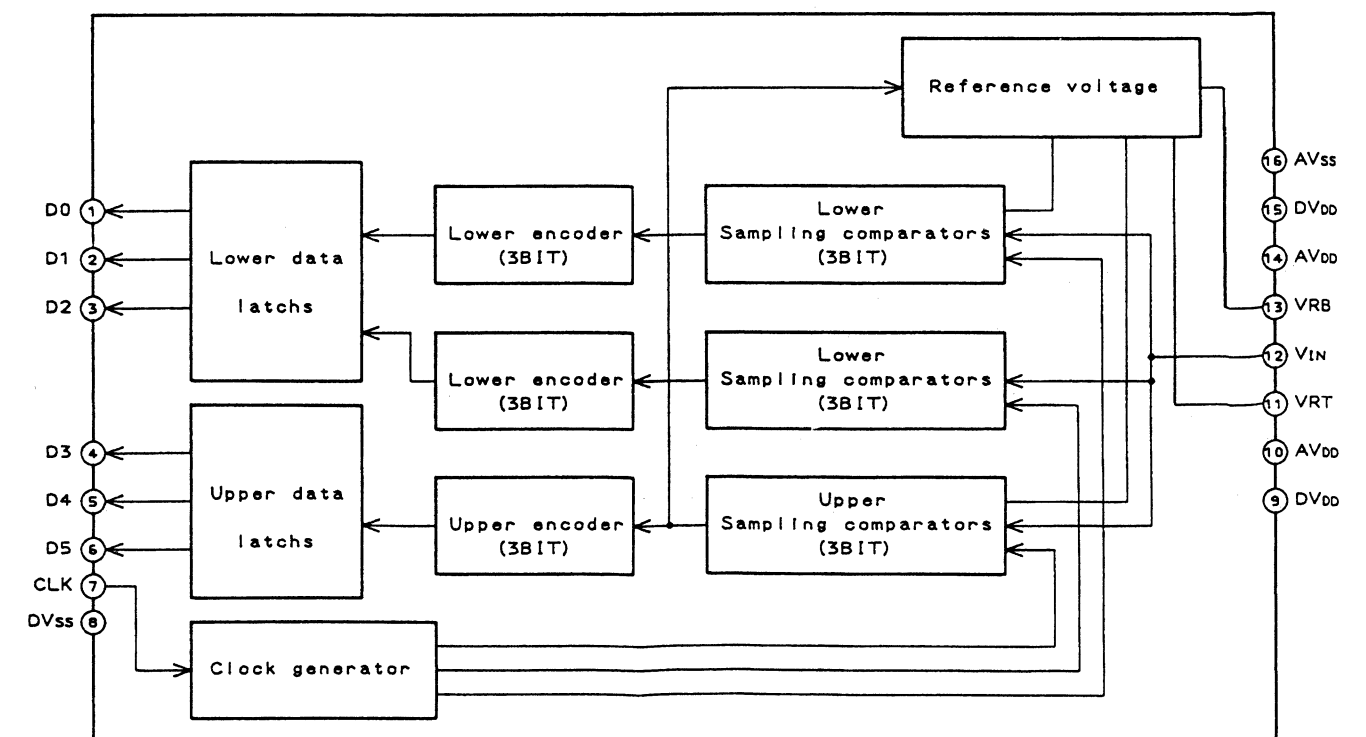

DAF02-FSY (AUTO CHASE FOCUS PROCESSOR)

M37451M8-224FP (CAMERA CONTROL MI-COM)

PORT NAME	PIN No.	FUNCTION
N.C	1	No connection.
WB -Y	2	White level detect input.
ARQ	3	Data transfer control signal input.
CK	4	Serial clock output to D/A.
SDI	5	Serial data out to D/A.
LD1	6	Chip select 1.
LD2	7	Chip select 2.
SCL	8	Serial clock out to EEP-ROM.
SDA	9	Serial data in/out from/to EEP-ROM.
SDE	10	Data transfer control signal out to titler.
SIN	11	Serial data out to titler.
HALL SW	12	Hall amp gain control output.
SCLK	13	Serial clock out to titler.
FMSPD2	14	Focus motor speed control out 2
FMSPD1	15	Focus motor speed control out 1
EE5	16	EE/PB judge input.
HD	17	H sync signal input.
VTG	18	V sync signal input.
SLEEP	19	Operation control in/out (power on/off)
CNVss	25	Chip mode select input (D-GND)
RESET/AC	26	Reset input.
X IN	28	X'tal connecting terminal.
X OUT	29	X'tal connecting terminal.
Vss	32	To be connected D-GND.
ZOOM T	33	Zoom motor control out (TELE)
ZOOM W	34	Zoom motor control out (WIDE)
SENSE	35	Focus reference position detect input.
HI-RESO	36	Auto focus mode control input.
LED-IHQ	37	I-HQ LED ON/OFF control out.
TARRY	38	Tarry LED ON/OFF control out.
AF9	39	Auto focus transferred data in/out
AF8	40	
AF7	42	
AF6	43	
AF5	44	
AF4	45	
AF3	46	
AF2	47	
AF1	48	
AF0	49	
DTH	50	Auto focus IC mode select out.
AEN	51	Data transfer direction control out to auto focus IC.
ACK	52	Serial clock out to auto focus IC.
TITLER	53	Digital memory available model select input.
EMZ1	54	PV-M2 or M4/MS8 model select input.
FCS RST	55	Focus motor driver reset output.
CW/CCW	56	Focus moving direction select output.
ATR	57	Focus motor drive pulse trigger output.
T/W2	58	Zoom encoder (detail) input.
T/W1	59	Zoom encoder (rough) input.
WB -V	62	Colour temperature range voltage detect input.
WB -CT	63	Colour temperature voltage detect input.
IRIS LEV	64	Iris open condition detect input.
KENPA	65	CCD output voltage detect input.
IRIS-CONT 2	66	Iris control voltage output (detail).
IRIS-CONT 1	67	Iris control voltage output (rough).

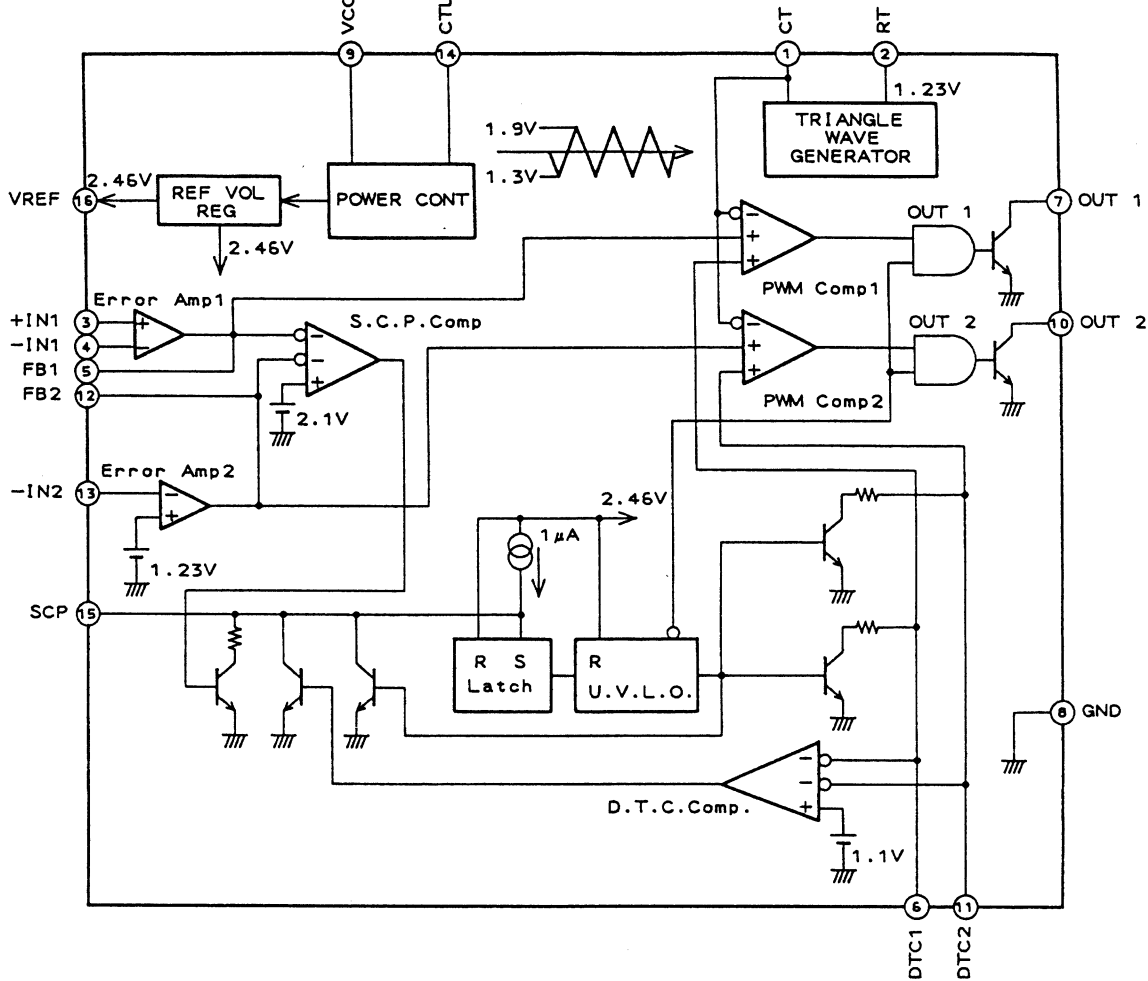

PORT NAME	PIN No.	FUNCTION
DA Vref	68	D/A convertor reference voltage terminal.
AD Vref	69	A/D convertor reference voltage terminal.
A Vss	70	Analogue power supply ground.
A Vcc	71	Analogue power supply terminal.
Vcc	72	Power supply terminal.
Vss	73	Ground terminal.
CMR-BUSY	74	Transfer BUSY output to OPE. MI-COM.
CMR-CLK	75	Serial clock input from OPE. MI-COM.
CMR-DATA	76	Serial data out to OPE. MI-COM.
OPE-DATA	77	Serial data in from OPE. MI-COM.
FADE SW	78	Black/white fader select output.
SHUT	79	Shutter speed select pulse output.

CXD1172AM (6 BIT A/D CONVERTOR)

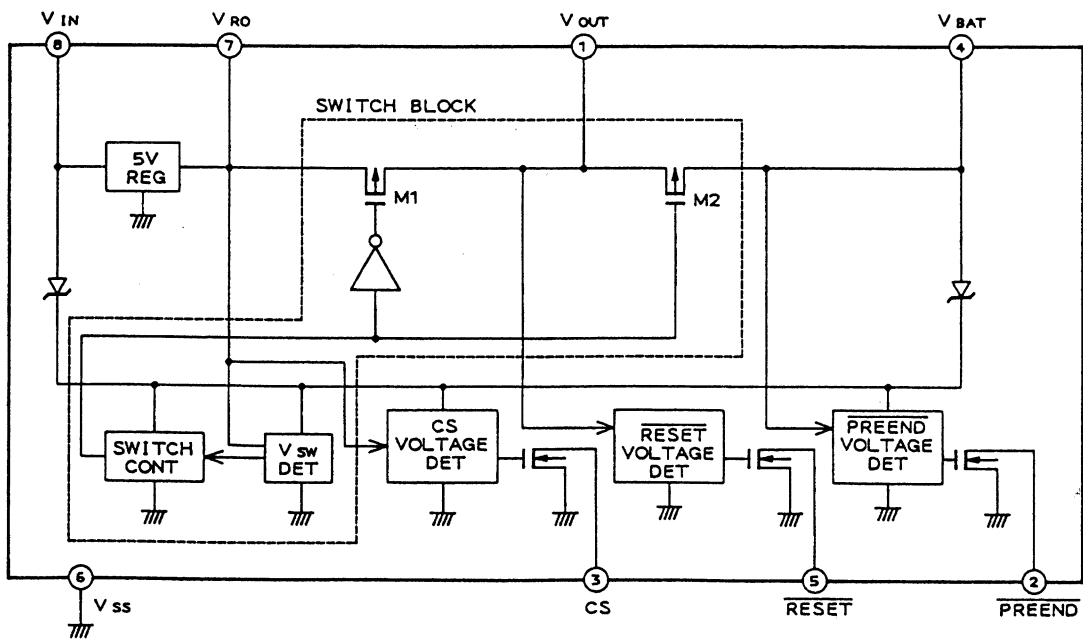

M37471M8-222 (OPERATION MI-COM)

PORT NAME	PIN No.	FUNCTION
CLKTST	3	X'tal OSC out for timer.
CMR-CLK	4	Serial clock out to camera MI-COM.
CMR-BUSY	5	BUSY input from camera MI-COM.
LI-DET	7	Back up (Lithium) battery voltage input (A/D).
SCAN7	6	Key scan outputs.
SCAN6	8	
SCAN5	9	
SCAN4	10	
SCAN3	11	
SCAN2	12	
SCAN1	13	
SCAN0	14	
Vref	15	A/D convertor reference voltage terminal.
Xin	18	X'tal connecting terminal (main clock).
Xout	19	X'tal connecting terminal (main clock).
AVss	21	Analogue power supply ground terminal.
Vss	22	Ground terminal.
Vcc	23	Power supply terminal.
Xc in	25	X'tal connecting terminal (timer clock).
Xc out	26	X'tal connecting terminal (timer clock).
RESET	28	Reset input.
IR	30	Remote control signal input.
PDOWN	32	Power supply voltage drop detect input.
CMR-DATA	33	Serial data input from camera MI-COM.
RESET/AC	35	Reset pulse output to external ICs.
AL	36	Power supply (always) control output.
SYS-CLK	37	Serial clock output to SYS-CON MI-COM.
FADER	38	Fader key input.
KEY0	39	Key scan inputs.
KEY1	40	
KEY2	41	
KEY3	42	
KEY4	43	
KEY5	46	
SLEEP	47	SLEEP output to external ICs.
WAKE-UP	48	WAKE UP output to SYS-CON MI-COM.
SYS-BUSY	49	BUSY input from SYS-CON MI-COM.
Vss	51	Ground terminal.
SYS-DATA	52	Serial data input from SYS-CON MI-COM.
STB	53	On screen display strobe output.
CLK	54	On screen display clock output.
OP-DATA	55	Serial data output to CAMERA, SYS-CON and OSD ICs.

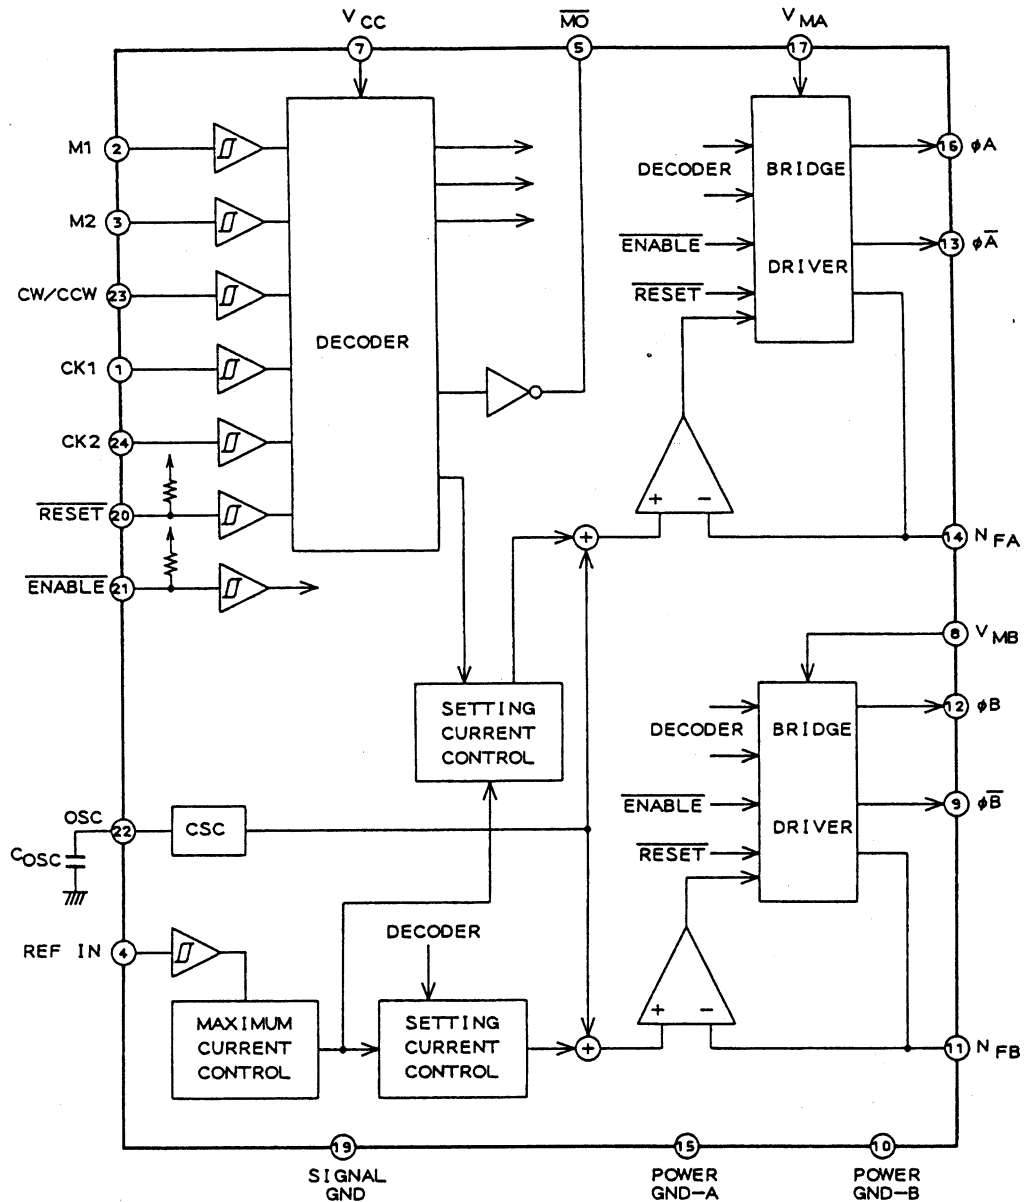

MB3778PFV (SWITCHING REGULATOR CONTROLLER)

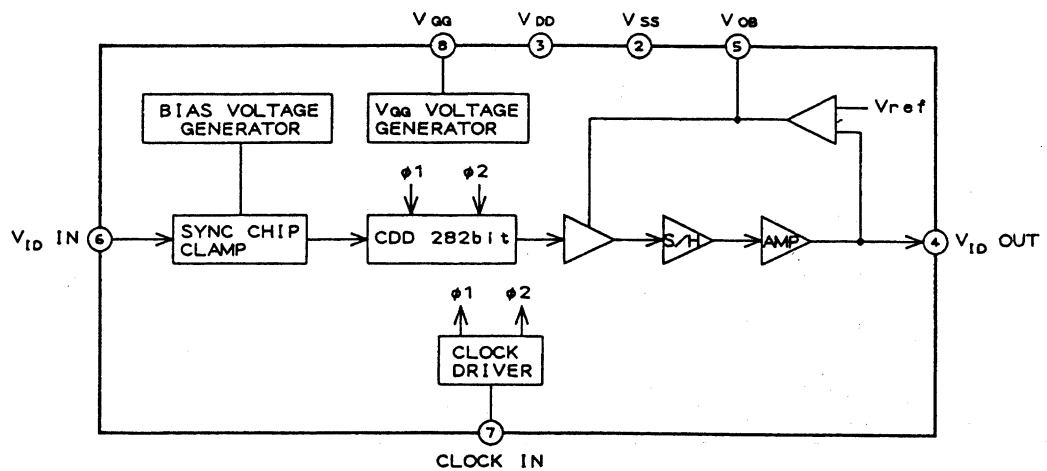

S-8420BF-T1 (BATTERY BACK-UP SELECT)

TB6504F-EL (STEPPING MOTOR CONTROL DRIVER)

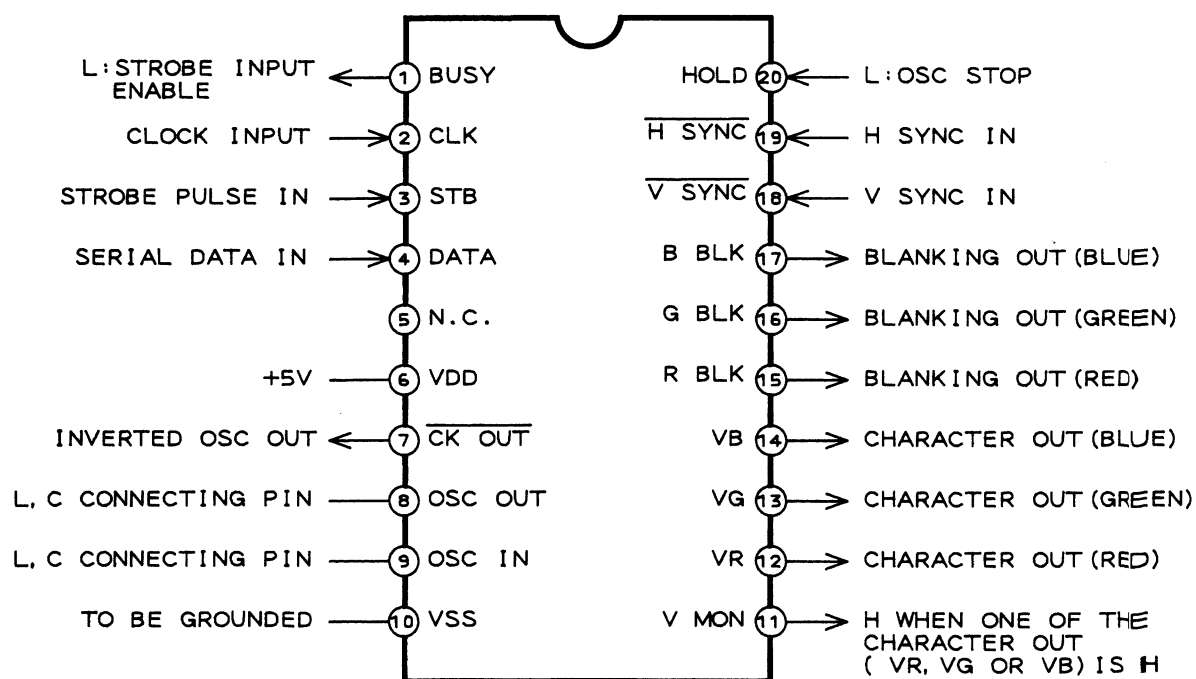

TL8811F (PAL CCD 1H DELAY LINE)

PORT NAME	PIN No.	FUNCTION
DPG	1	DRUM PG pulse input.
SI	2	Serial data input from OPE. MI-COM.
SO	3	Serial data output to OPE. MI-COM.
SCK	4	Serial clock input from OPE. MI-COM.
WAKE UP	5	Start up command input.
ATF PLS	6	ATF pulse input.
SLW PLS	7	Slow pulse input.
REC. SAF	8	Tape REC enable detect.
CFG	9	CAPSTAN motor FG pulse input.
DFG	10	DRUM motor FG pulse input.
ENV. PLS	11	RF envelope detect pulse input.
C. SYNC	12	Composite sync input.
SWP	13	Switching pulse output.
SLEEP	14	Stand-by signal input.
VP	15	Quasi V sync output.
ME	16	I-HQ control output.
DPWM	17	DRUM motor servo error output.
CPWM	18	CAPSTAN motor servo error output.
AVss	19	Analogue GND.
AVref	20	Reference voltage.
ATF	21	ATF (Automatic tracking finding) signal input.
ENV. DET	22	VIDEO RF envelope input.
SS	23	Start sensor input.
ES	24	End sensor input.
SRP	25	Supply reel pulse input.
TRP	26	Take up reel pulse input.
BAT	27	Battery voltage detect input.
DEW	28	Dew sensor input.
RESET	29	Reset input from OPE. MI-COM.
Vdd	30	+ 5 V.
X2	31	Clock 2.
X1	32	Clock 1.
Vss	33	GND.
TP	34	TEST pin.
TSA	35	ATF lock window output.
JOGPLS	36	Jogging control output.
EDIT	37	Tape Dubbing control output.
SEL1	38	ATF reference select output 1
SEL2	39	ATF reference select output 2.
REC MUTE	40	Audio REC mute control.
FE	41	Flying erase ON/OFF control.
MODE B	42	Audio mode detect input B.
MODE A	43	Audio mode detect input A.
MONO	44	Audio monaural detect input.
MATRIX	45	Matrix ON/OFF control output.
MODE2	46	Audio out control output (H: L-ch, L: R-ch).
MODE1	47	Audio out control output (H: R-ch, L: L-ch).
FADE	48	Fade control output.
A.MUTE	49	Audio mute control output.
REC.S	50	REC power supply control output.
Hi8	51	Hi8 type recording control output.
SCL	52	EEP-ROM serial clock output.
SDA	53	EEP-ROM serial data output.
TUNE	54	I-HQ control output.
VCS	55	Video IC chip select output.
VSO	56	Serial data output for Video IC function control.

PORT NAME	PIN No.	FUNCTION
VCK	57	Serial clock output to video IC.
VS2	58	System set output 2 (PV-M2/M4/MS8).
VS1	59	System set output 1 (PV-M2/M4/MS8).
MP/ME	60	Tape detect output.
NORM/Hi8	61	Tape type output.
CSW	62	Cassette switch input (ejected or not).
RSW3	63	Rotary switch (mecha. position) 3 input.
RSW2	64	Rotary switch (mecha. position) 2 input.
RSW1	65	Rotary switch (mecha. position) 1 input.
RUN	66	Not used.
Vss	67	To be grounded.
EA	68	To be pulled up.
LM.F	69	Loading motor direction control output (forward).
LM.R	70	Loading motor direction control output (reverse).
PB	71	PB control output.
TRICK	72	System control output when TRICK mode.
SP	73	Tape speed detect output.
F/R	74	CAPSTAN motor direction control output.
CM STOP	75	CAPSTAN motor stop output.
DM STOP	76	DRUM motor stop output.
Vdd	77	Supply + 5V.
STILL	78	Still mode output.
SRDY	79	Serial data transfer ready output.
Vref	80	Reference voltage output.

μPD6451 AGT-819 (CHARACTER GENERATOR)
